Digital Transformation

Custom Development

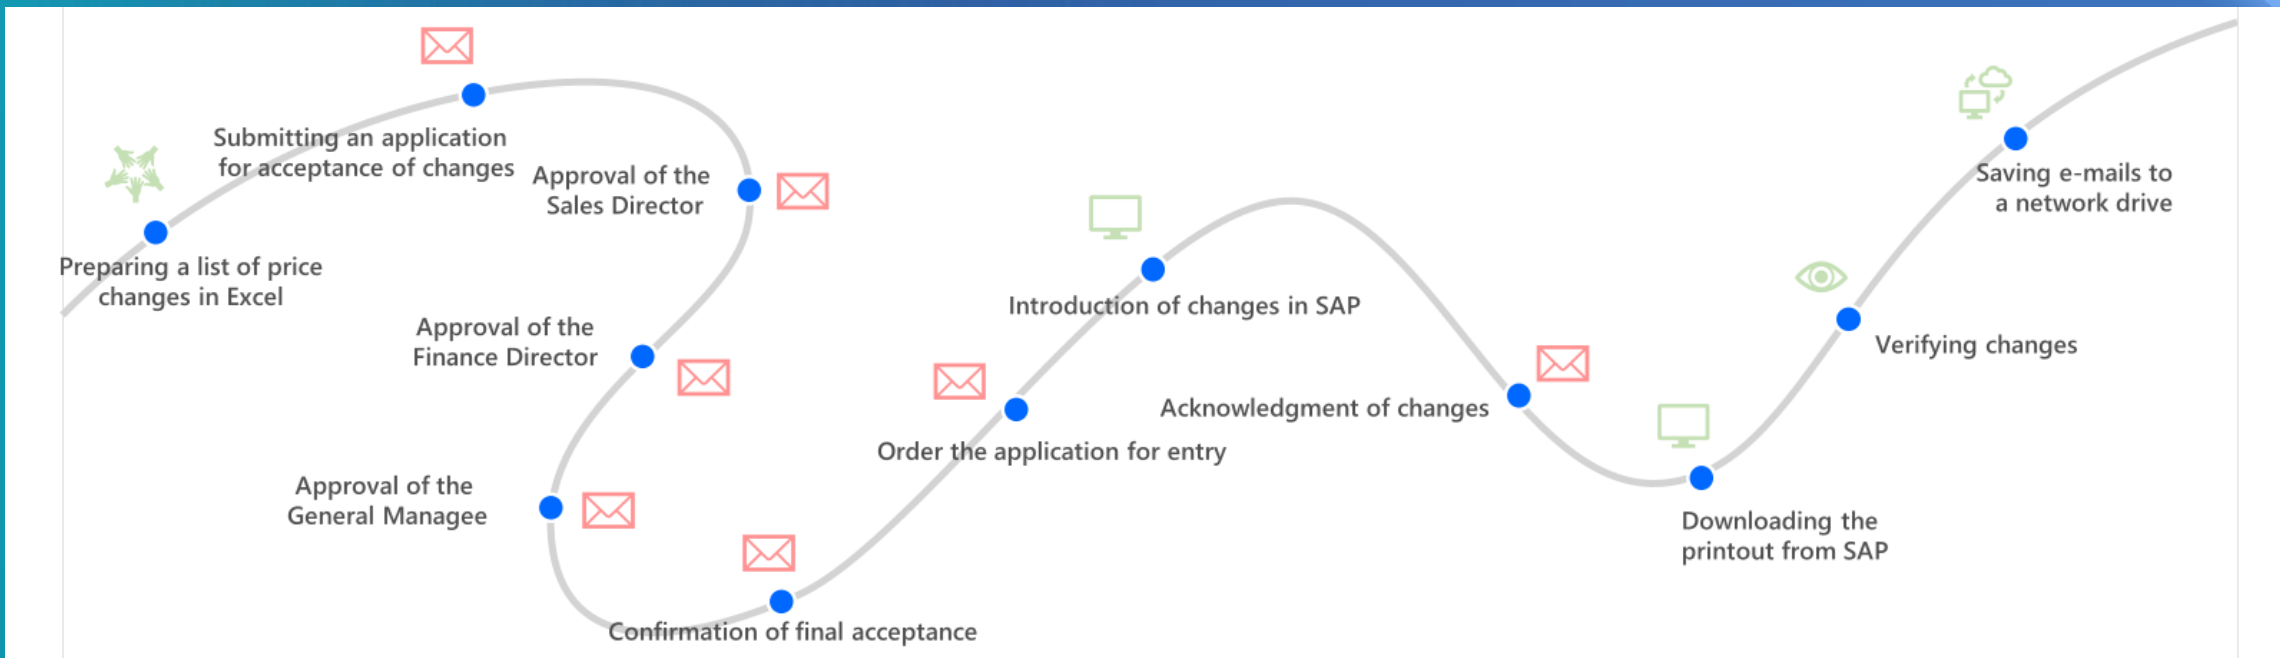

- CRM system
- SAP integration with M365
- Building advanced integrations
- Building your own LLM model
- Building an ETL process for reports

Hyper Digital Transformation

No Code / Low Code

- SAP integration with M365
- Price approval process, tracking changes and conducting the approval collection process
- Acceptance of an order or quote
- Scheduling meetings with clients
- Automation of financial management reporting
- Warehouse replenishment management
- Inventory forecast and low inventory notifications
- IT assortment management
- Submitting working time reports
- Employee onboarding
- Expense reporting process

- 120 wniosków akceptacji zmian cen
- 20 produktów podlegających zmianie cenowej
- 60 audytów

Przekłada się to średnio rocznie na:

- 2400h potrzebnych do obsługi procesu
- 240h potrzebnych do przygotowania danych pod audyt
- Do 20 dni na zakończenie pojedynczego cyklu

BENEFITS

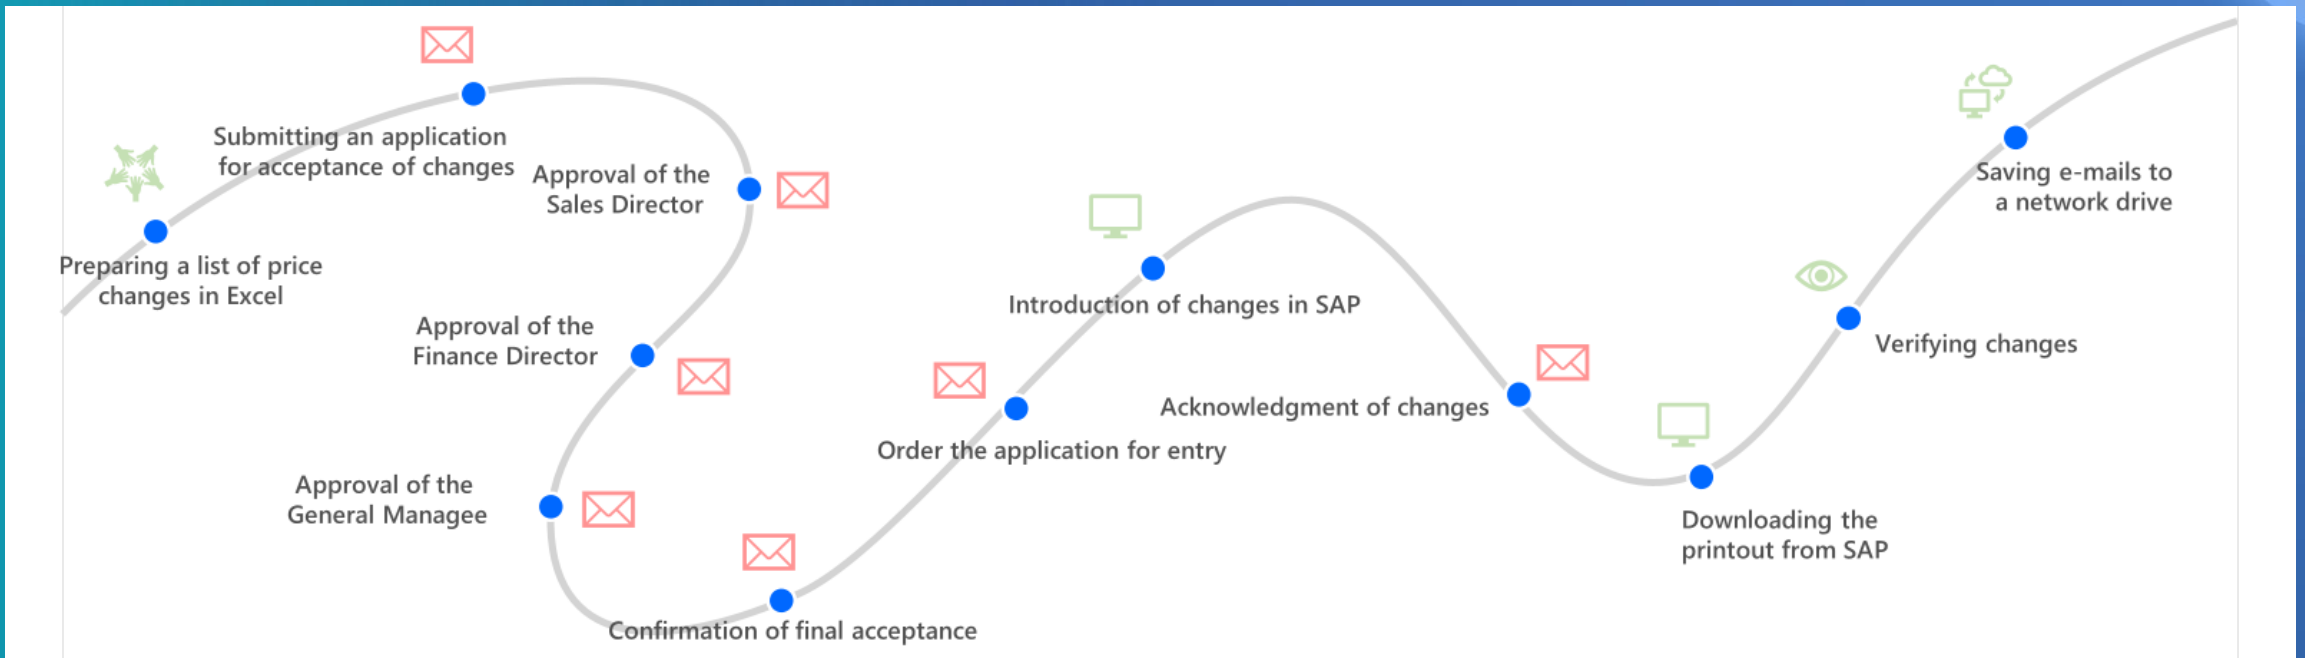

- FREEING UP IT RESOURCES** | "82% of companies consider developing IT solutions outside the IT department as important"
- EFFICIENCY AND TIME SAVING** | "No-Code can **reduce delivery time by 90%**"
- MONEY SAVINGS** | "Over 3 years, savings in the IT department **increased by USD 4.4 mln.,**
- MORE DATA AT HAND** | "We collected data that **was not available before.**"

CUSTOMER TESTIMONIALS

- SCHNEIDER ELECTRIC** | "60 applications in 20 months. Most in 10 weeks"
- BUDIMEX** | "Apps reduced working time by over 85%,
"The number of registered reports increased by 300%"
- RICOH** | "Return on investment is 253% in 7 months."

Hyper Sprint?

- 120 wniosków akceptacji zmian cen
- 20 produktów podlegających zmianie cenowej
- 60 audytów

Przekłada się to średnio rocznie na:

- 2400h potrzebnych do obsługi procesu
- 240h potrzebnych do przygotowania danych pod audyt
- Do 20 dni na zakończenie pojedynczego cyklu

- 120 wniosków akceptacji zmian cen
- 20 produktów podlegających zmianie cenowej
- 60 audytów

Przekłada się to średnio rocznie na:

- 2400h potrzebnych do obsługi procesu → 600h
- 240h potrzebnych do przygotowania danych pod audyt → 30h
- Do 20 dni na zakończenie pojedynczego cyklu → 5

Hyper Sprints
SMART speeding up

Fusion Teams

Evolution, not Revolution

Overview

1

THE STORY

On average, CONTOSO carries out annually approximately:

- 120 requests for acceptance of price changes
- 20 products subject to price change
- audit of pricing decisions for 60 products

This translates on average annually into:

- 2400h needed to handle the process
- 240 hours needed to prepare data for audit

In addition, at some point, the decision was made to give up the Jira license. In addition, CONTOSO has M365 E3 licenses.

THE CHALLENGE

All decision-making communication is based on e-mails with attachments and comments. This causes significant difficulties both in the progress of the decision-making process and makes it practically impossible to reconstruct the decision-making steps taken in the process of acceptance or rejection.

This increases the risk of consequences as a result of the audit and hinders the flow of the process

In addition, the IT department does not have sufficient knowledge and experience to carry out the price approval process in a different way than in JIRA.

THE SOLUTION

A decision was made to carry out the weekly sprint independently/in cooperation with Developico. The assumption is to analyze the needs, create the scope of work, design and implement an MVP (Minimum Viable Product) of an automated process in 5 days. CONTOSO will only use the licenses it has for this purpose. Finally, it will recommend further steps to strengthen the digital transformation in the organization.

GOALS

Simplifying the
process

Abandonment of
obsolete IT
systems

Lower
implementation
costs

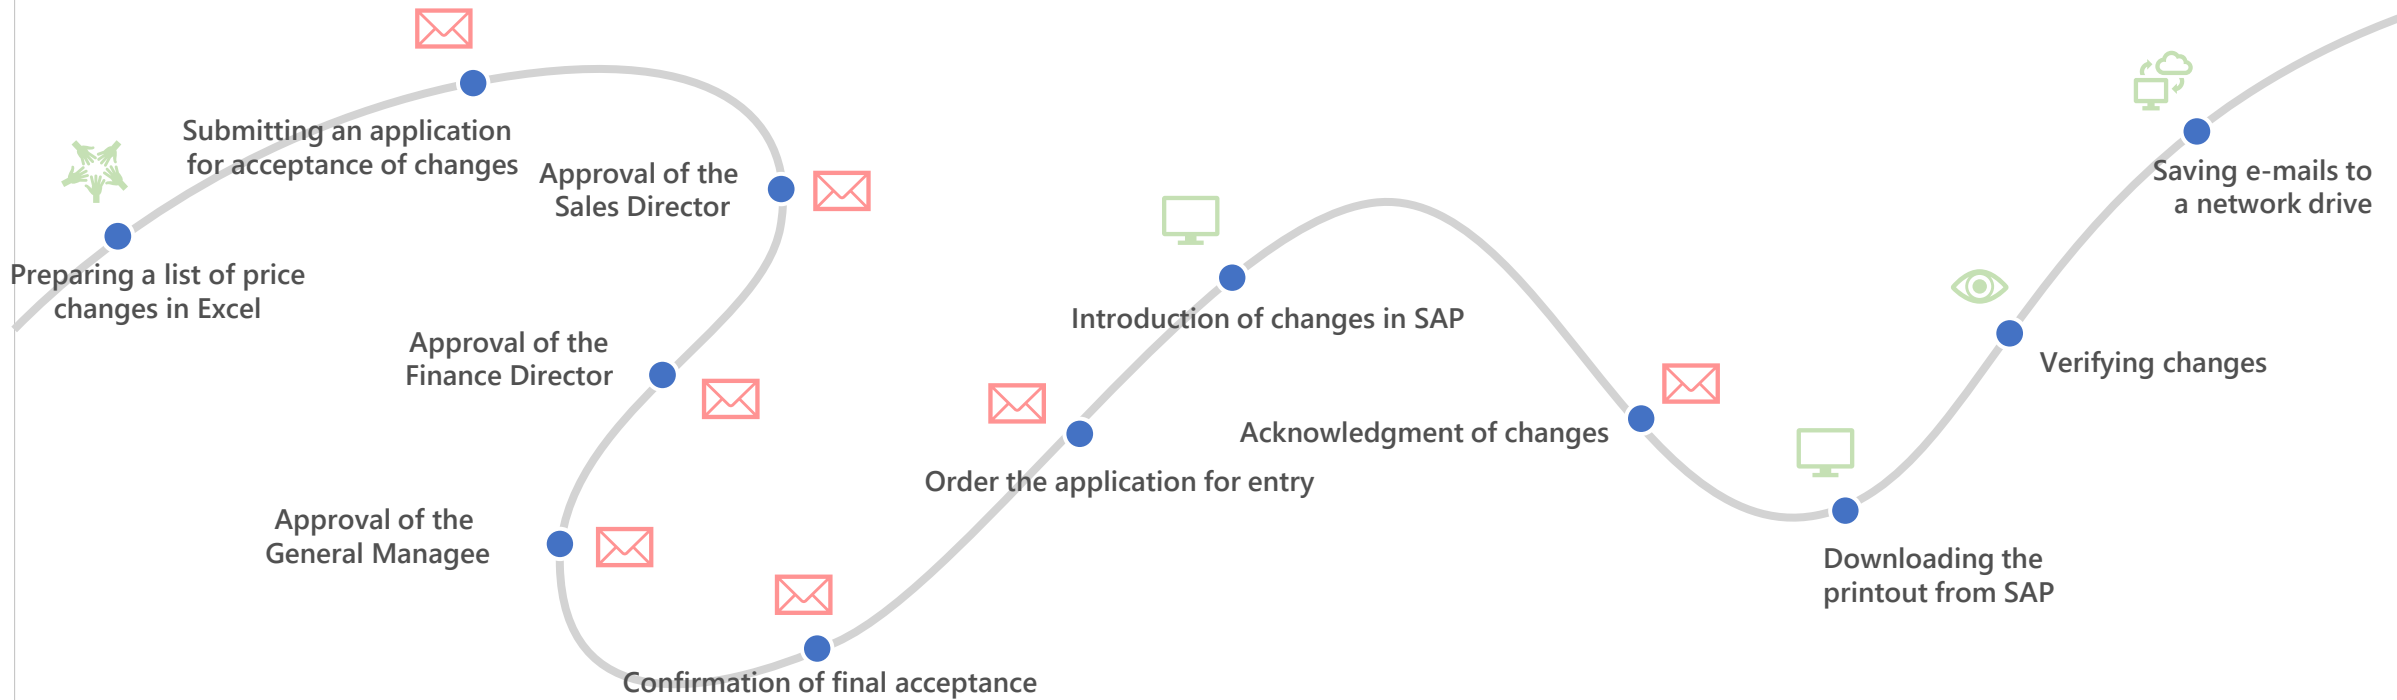

2

Simplifying the price acceptance process
Improve data integrity
Increase in the number of covered employees
Reduced involvement in the process
Improve overall performance

Opting out of JIRA
Microsoft E3 license usage

Leveraging MS Power Platform
The use of functionalities within the
MS E3 license

CURRENT STATE

WHAT WORKS

- Excel with changes has a standardized structure
- Ordered changes are implemented
- Archiving of made changes

CHALLENGES

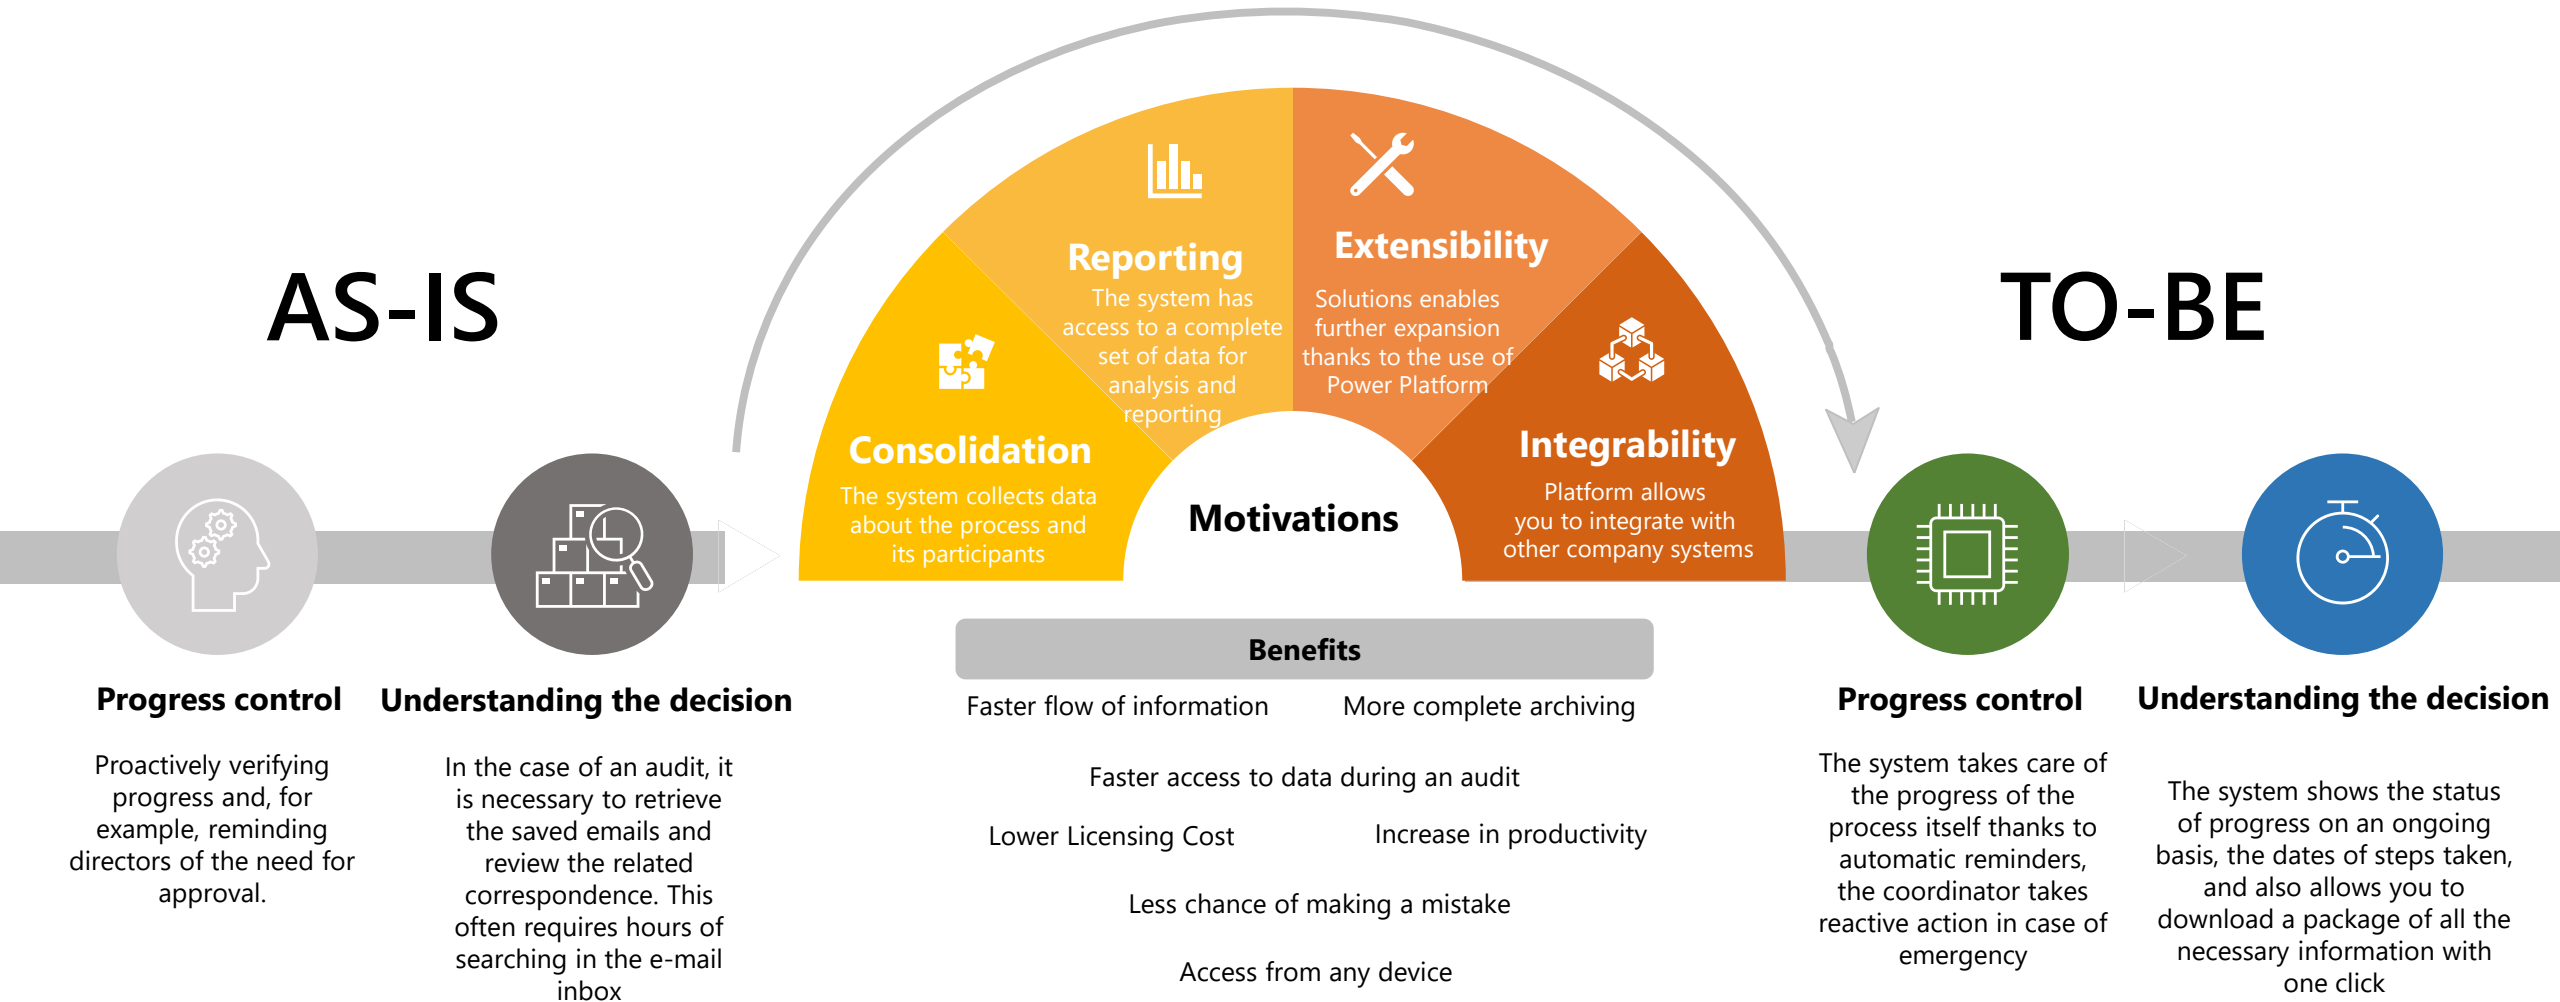

- Difficulty in determining the current status of the application
- Monitoring the progress of the application by the coordinator
- Inability to reconstruct the decision-making process

NEEDS

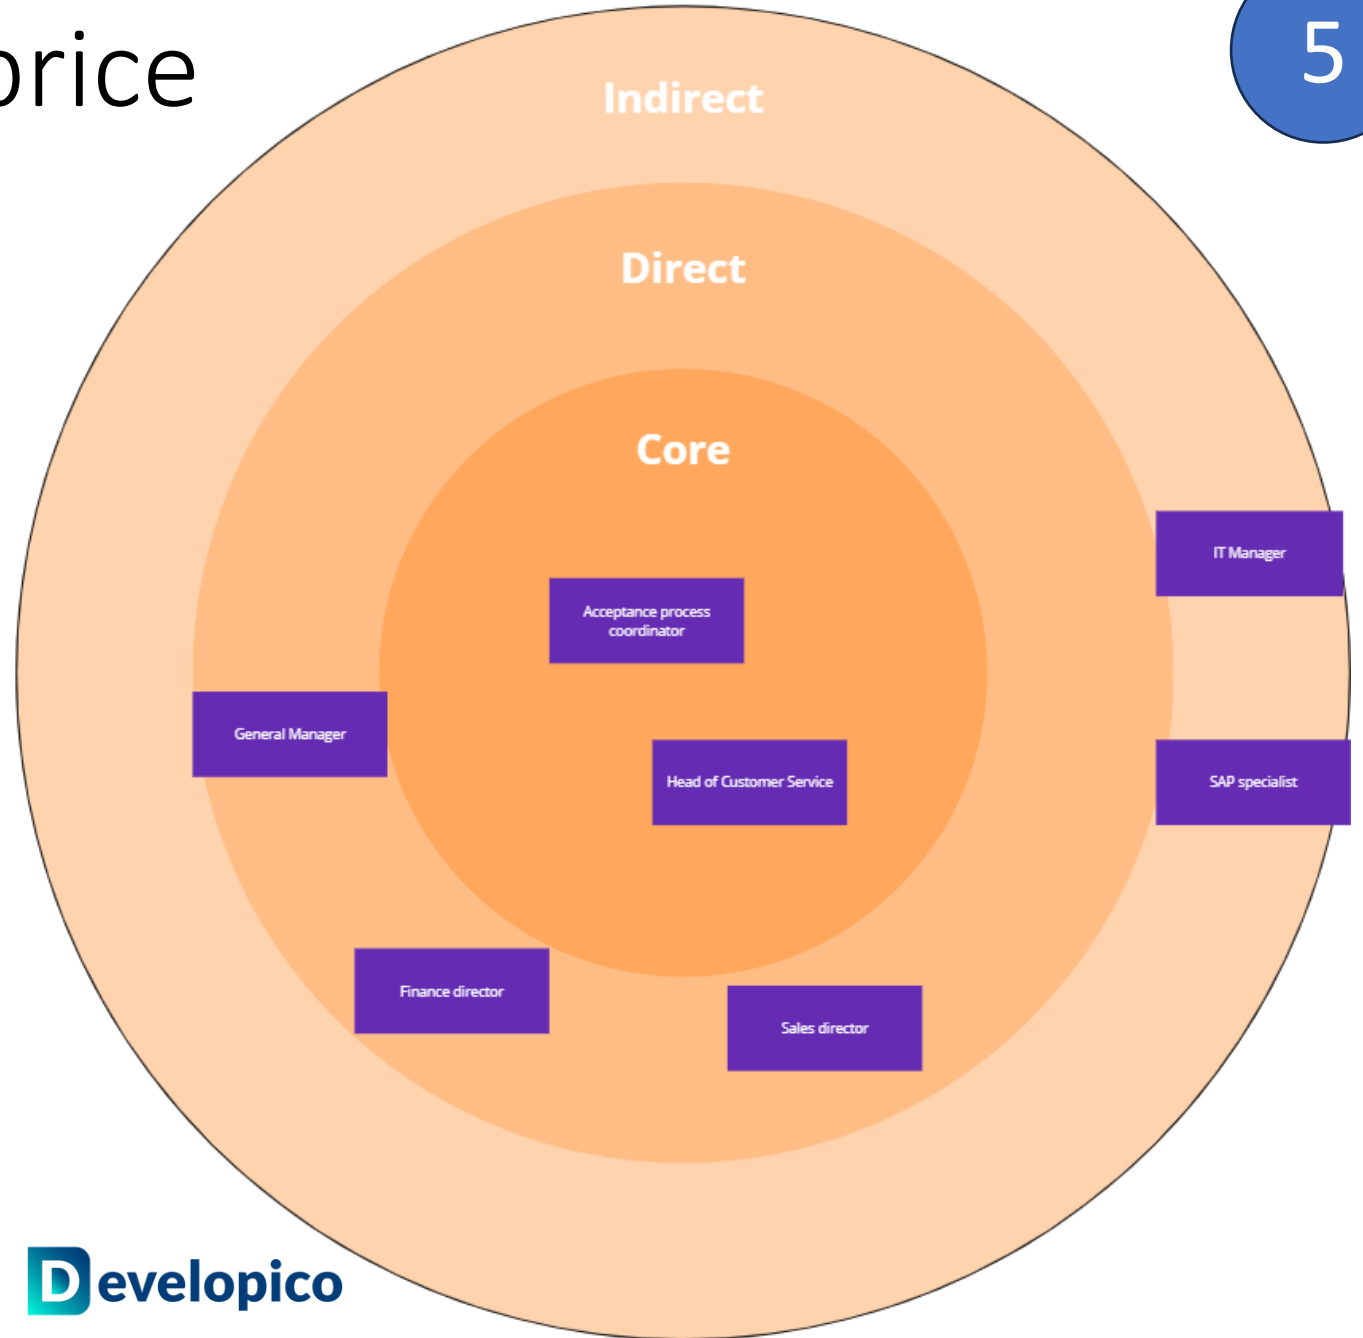

- Streamlining the flow of information
- Increase productivity
- Improving audit data acquisition
- Reduce the stress of the process

Experience Journey

change in the user experience of the price acceptance process

Stakeholders in the price acceptance process

Functional Requirements

Id	Name	Category	Priority	Description
1	Collection of information regarding decisions	Data	M	The system collects all information related to the processed application. In particular: The name of the user making the decision in the system Application Id Decision with commentary Approval level Date of initiation of the decision Date of decision Deadline for making a decision
2	Director can read, can't edit, can reject decision-making, can accept, can add a comment	Permissions	M	The system allows the Director role to take only specific actions.
3	The coordinator of the approval process (e.g. Trade Marketing employee) can attach an excel document with price changes or new products	Permissions	M	The system allows the Coordinator role to take only specific actions.
4	Make an acceptance or rejection decision. Both options have the option to add a comment	Action	M	The system allows you to make a decision with a comment. In case of acceptance, the system forwards the request to the next approver. In case of rejection, the system goes back to the Process Coordinator and all approvals are required again.
5	The data controller must attach the PDF of the SAP list and click "Confirm SAP update"	Action	M	The system allows the Data Controller role to attach a PDF file with the SAP catalog and click the button to finalize the entire request.
6	Entering additional data into the application	Action	M	Field: Description of the proposal Effective date of the new price Attachments to the application If new: Product number Name Type (Grain, Ground, Instant, Capsules, Accessories, Espresso Machines) Brand (Tchibo, Eduscho, Davidoff, Gala, Espresso Machines, Accessories)
7	No user can remove an attachment from a request	Action	M	The system does not allow any role to remove any attachment from the request.
8	An SAP specialist can mark the status of the process as "Confirm SAP update"	Action	S	The system allows the SAP Specialist role to mark the request as ready for verification

Functional Requirements

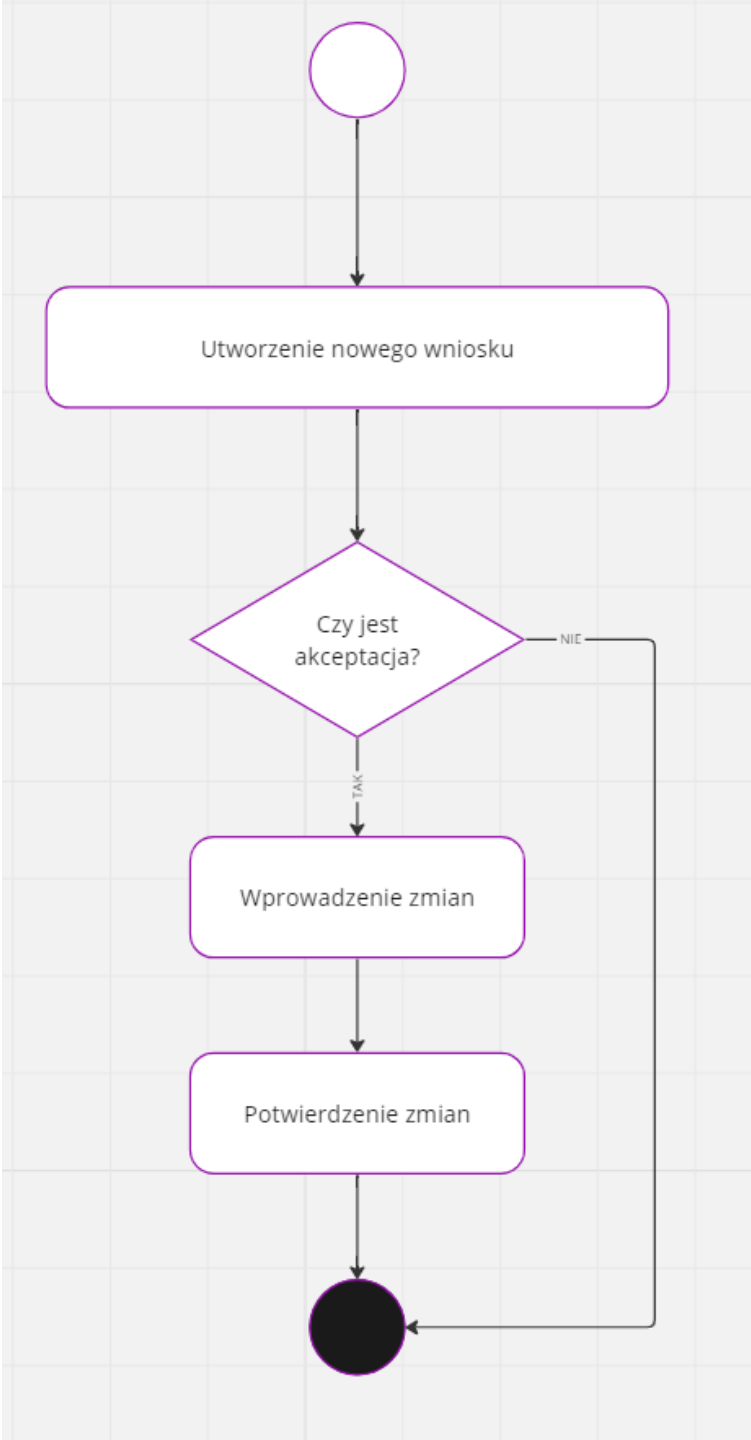

Id	Name	Category	Priority	Description
9	Find the request by name, code, request type, coffee type, brand, as well as ID, request type, requestor, status, decision, approval level, and pricing date. In addition: Requests awaiting approval, Requests awaiting SAP update and Requests awaiting SAP update verification	Searchability	S	
10	The Director, SAP Specialist, and Data Controller can only see documents that have been approved	Reporting	M	
11	Checking open processes	Reporting	M	The system allows you to check processes that are open
12	Auditing version history	Reporting	S	The system allows you to check the full history of changes in the status of the application, as well as all contextual information such as: Date of action taken The person making the change New Condition The person the system is waiting for
13	How long the proces is waiting for a person	Reporting	C	The system allows you to check how long the request has been waiting in a given status.
14	Information about the decision to be taken	Notification	S	The person who is to make the decision is immediately informed about this fact by e-mail. The message should contain all the necessary information to make a decision
15	Information about the decision	Notification	S	The process coordinator receives notification of the decision on the application, decision and comment. The message is sent by e-mail.
16	The process coordinator is notified of the change in the status of the request	Notification	C	The process coordinator receives a notification that the status of the request has been updated. The message is sent by e-mail.
17	The solution uses an English-language interface			
18	The user has the option to generate a report with a list of all requests			
19	The user has the option to generate a report with a list of all decisions for the request			
20	The coordinator can continue the process even after rejection, without having to open a new application	Action	C	The system allows the Process Coordinator role to continue the process even after the request has been rejected, without losing the context of the request history
21	Finding the request after the date of creation of the request (from - to)	Searchability	M	

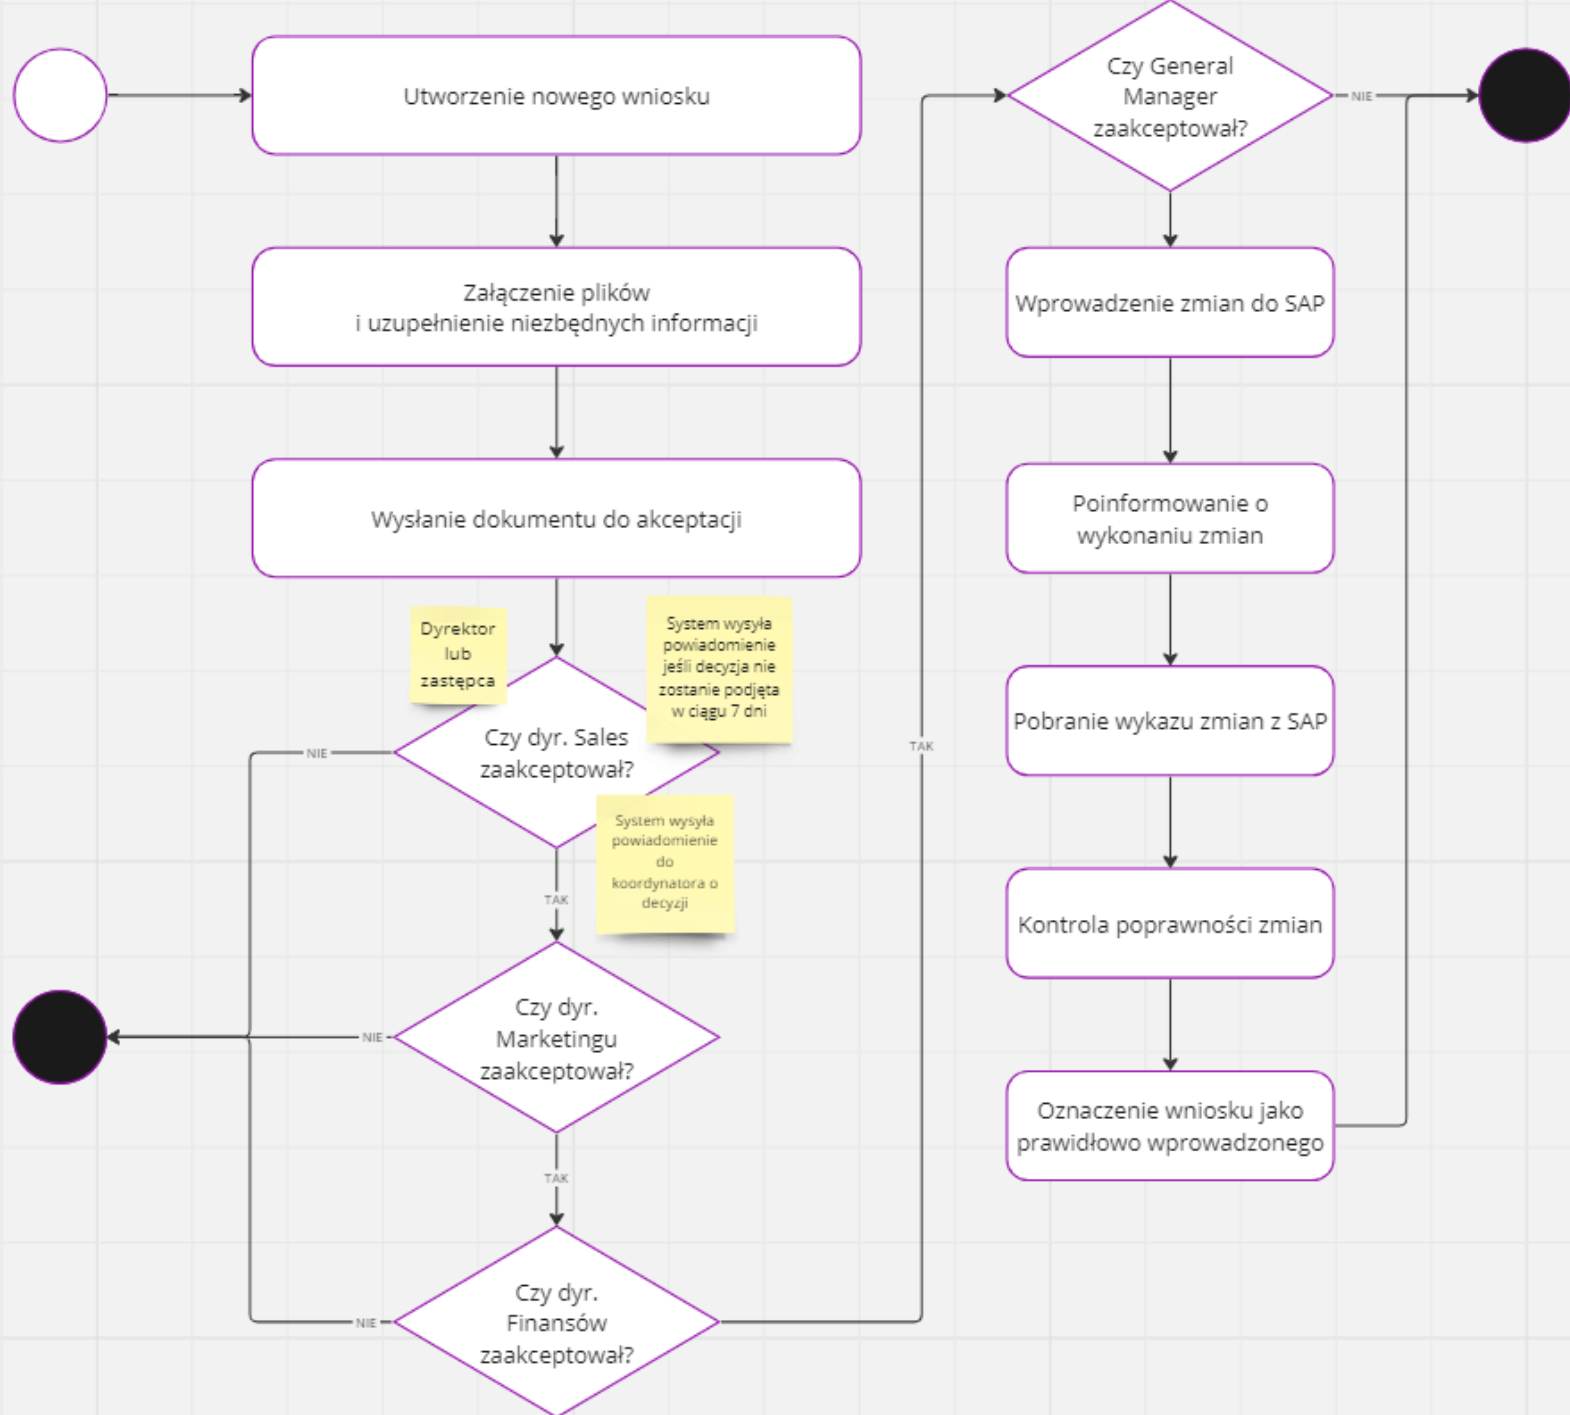

Compromises

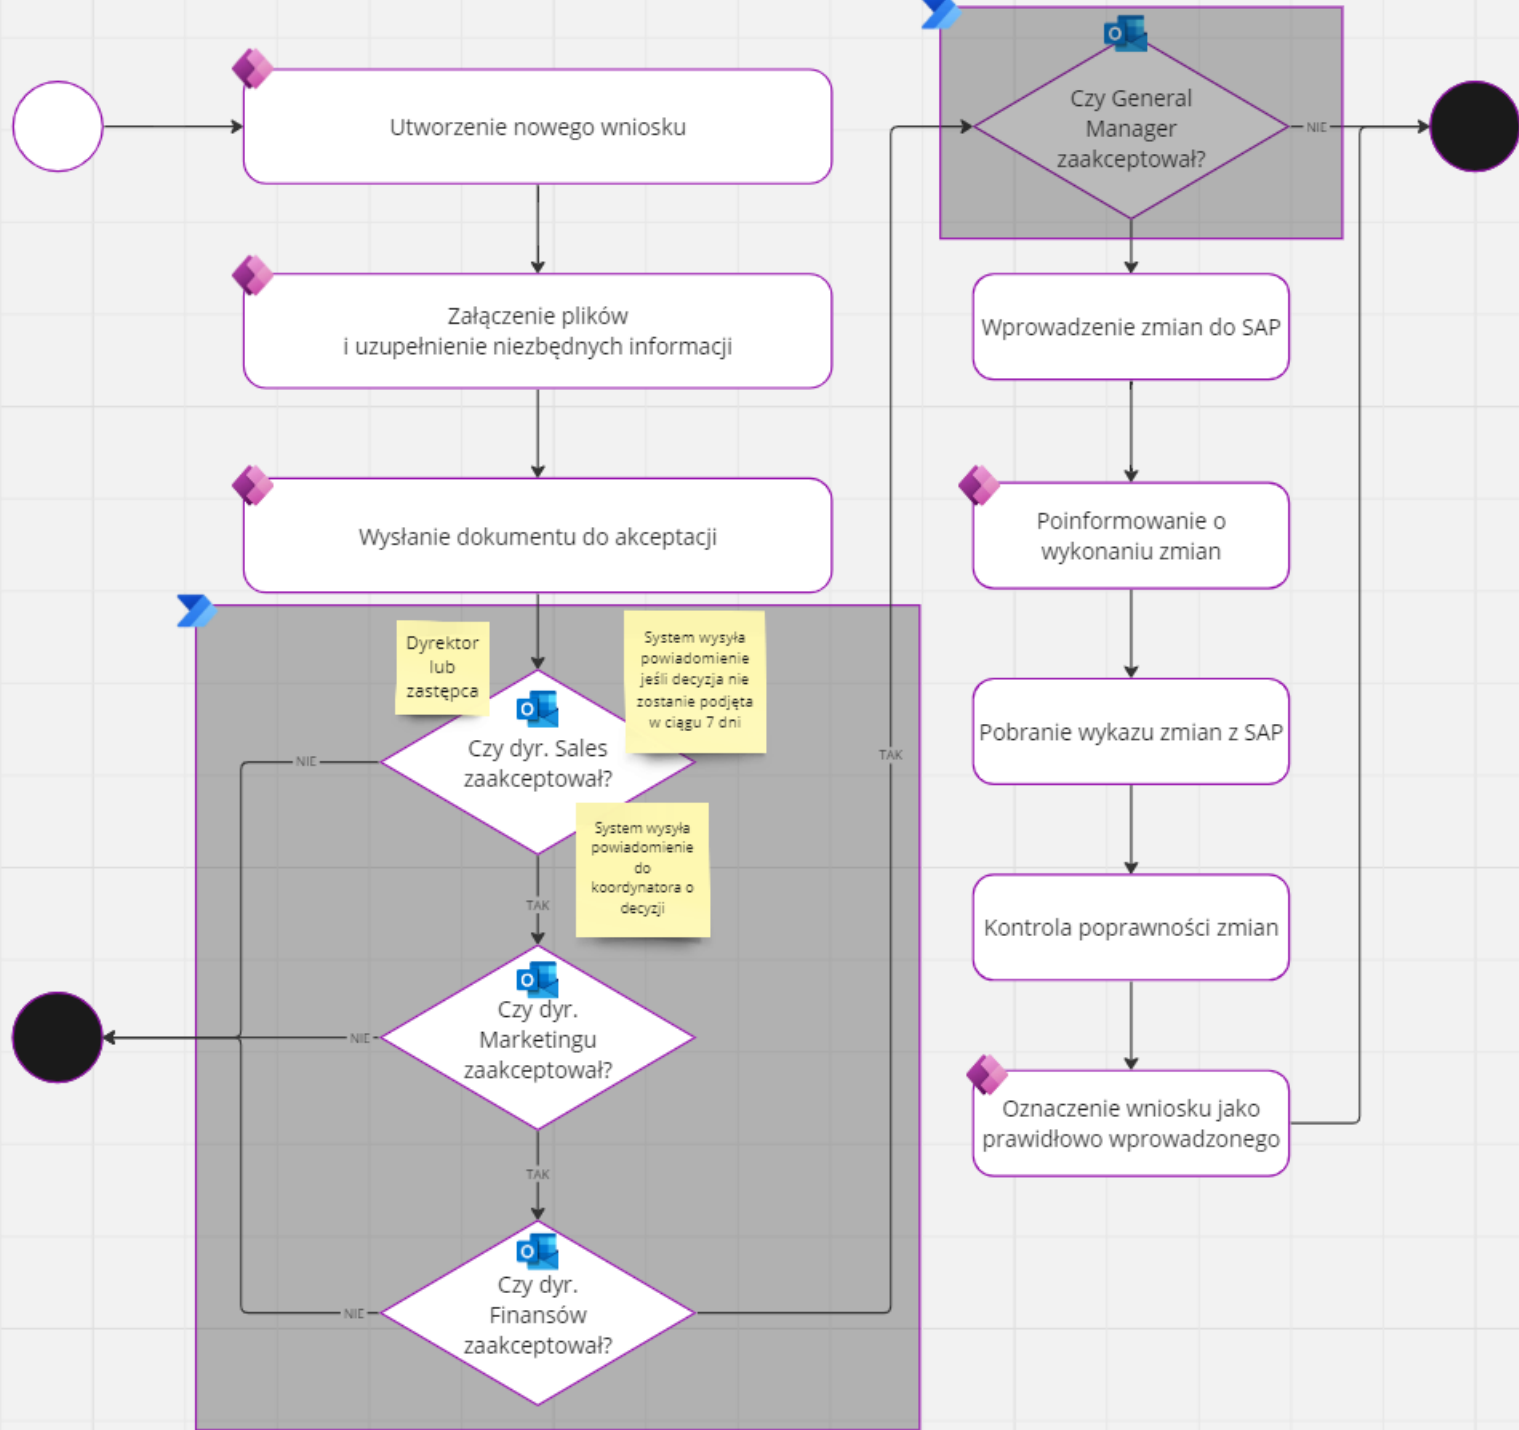

Id	Name	Category	Comment (except Lack of Time)
1	Mobile view	Accessibility	
2	The solution does not support multilingualism	Accessibility	
3	Finding the conclusion by the product	Searchability	We keep data in Excel
4	Ability to search by from-to date in relation to the validation or finalization of the request	Searchability	
5	An administrator can change the owner of the approval process	Permissions	
6	Inability to remove the product	Permissions	We keep data in Excel
7	Marking the content of the application with new products through multiple-choice lists for type, brand and products	Action	Using this information to filter out requests is complicated in SharePoint Online (it requires a lot of workarounds). It would be necessary to use, for example, Dataverse
8	An SAP specialist can make changes to SAP	Action	Implemented outside the system
9	The process coordinator can generate a set of product price changes to a selected customer	Action	
10	Ability to make a decision on the application from the level of e-mail	Action	The standard email form for the Approvals action in Power Automate does not have an intuitive interface, so we decided to brand the email with a link to the decision form in Power Automate. However, there is an option to shorten the decision by 1 click.
11	The data controller may report the incorrectness of the data entered	Action	Implemented outside the system
12	New Product Launch	Action	We keep data in Excel

Compromises

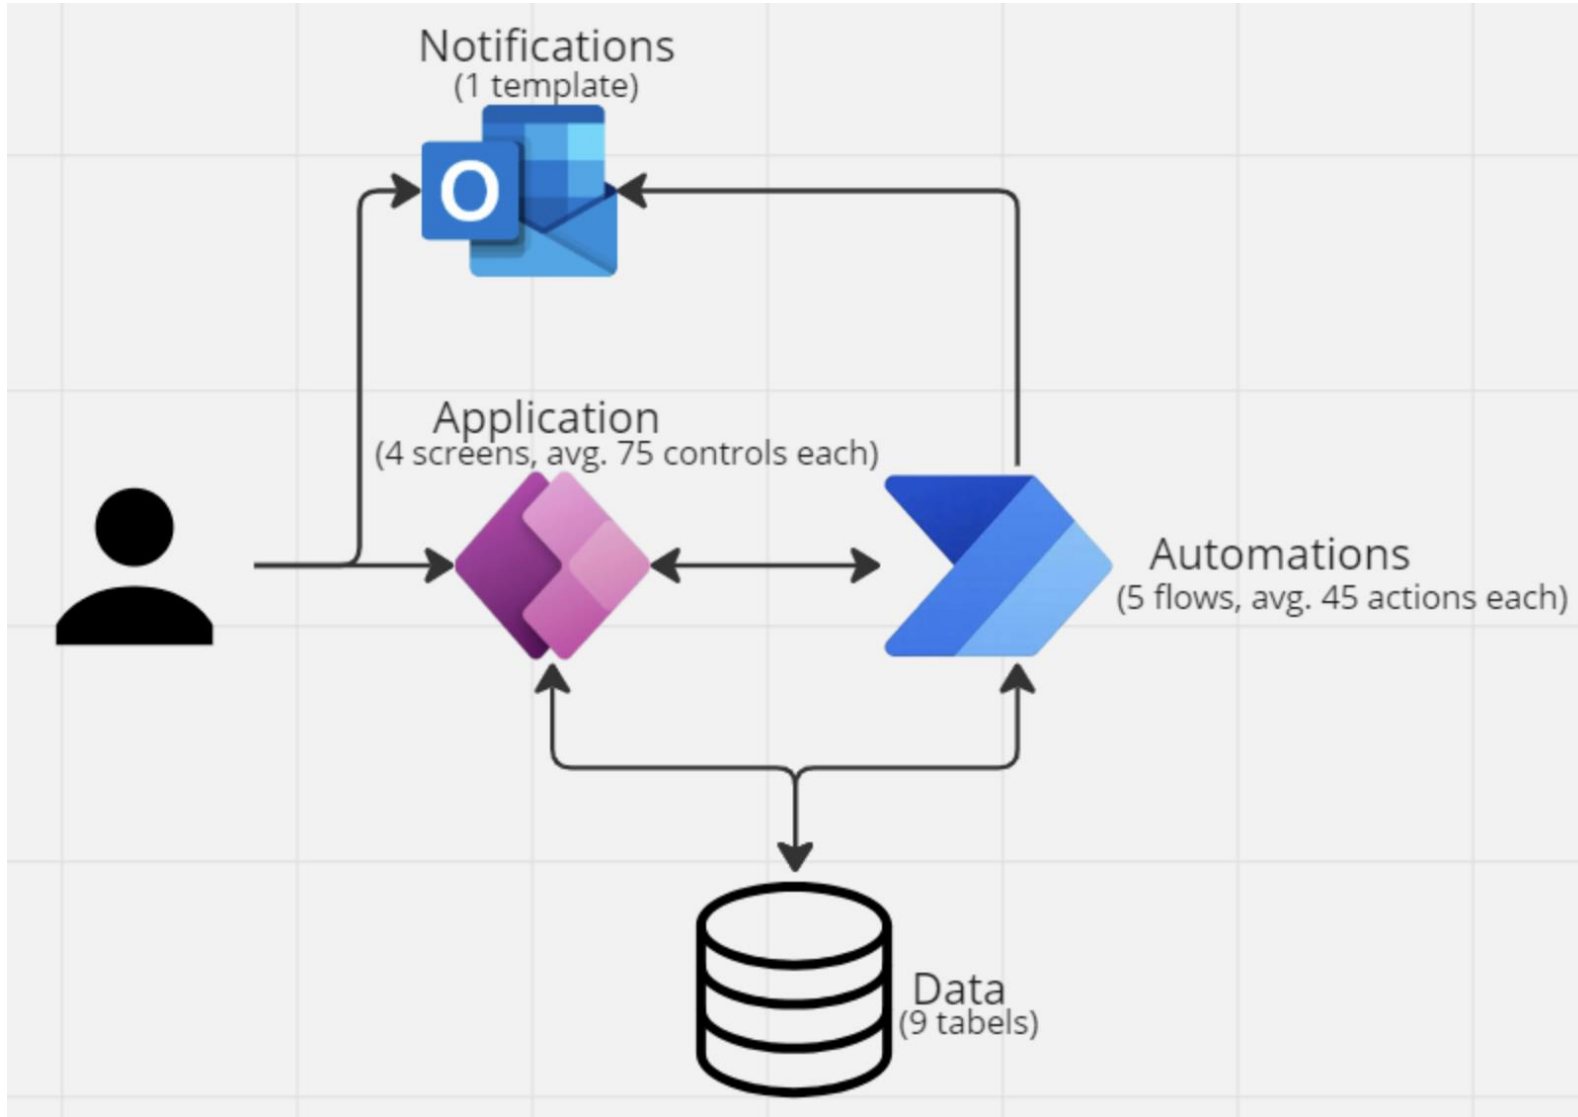

Id	Name	Category	Comment (except Lack of Time)
13	Introduction of a new co-packing product	Action	We keep data in Excel
14	Changing the price of a product	Action	We keep data in Excel
15	Adding a product to the acceptance package	Action	We keep data in Excel
16	Ability to generate a set of price changes to the customer	Action	We keep data in Excel
17	Attaching video files	Action	No need for it
18	File package size greater than 10MB	Action	Ogranczenia wybranej platformy SharePoint
19	Configure the number of reminder days	Action	
20	Migration of historical decision data	Migration	
21	Relational database usage (Datarverse, SQL)	Data	Refusal of premium licenses
22	Integration with SAP	Action	Refusal of premium licenses
23	Manage in-app products	Action	Refusal of premium licenses

Grupa Budimex chciała zoptymalizować proces gromadzenia informacji z terenów budowy w różnych częściach kraju. By to osiągnąć i uzyskać lepszy wgląd w dane, zbudowano szereg aplikacji mobilnych opartych na **Power Apps**. Dzięki rozwiązaniu do zarządzania zadaniami, przepływami pracy oraz wynagrodzeniem, przygotowanie comiesięcznych raportów **zajmuje 15 minut zamiast godziny**. Z kolei aplikacje do rejestrowania czasu pracy sprzętu wygenerowały dalsze oszczędności, **skracając czas przygotowania raportów o ponad 85%**.

Crisis Occurrence Management

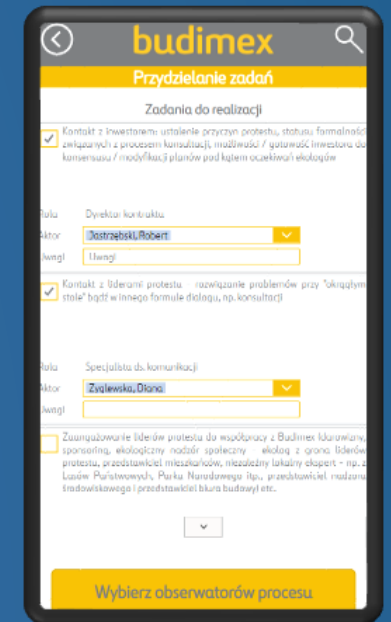

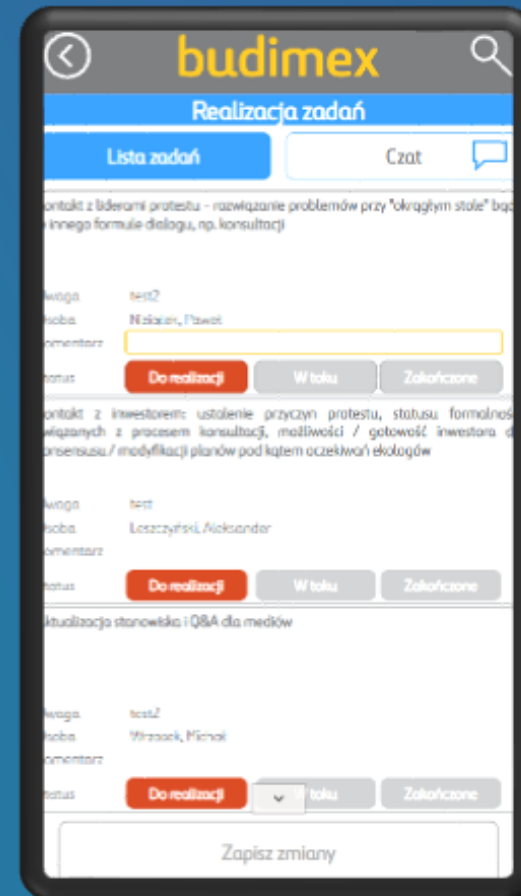

Faster response time to an incident

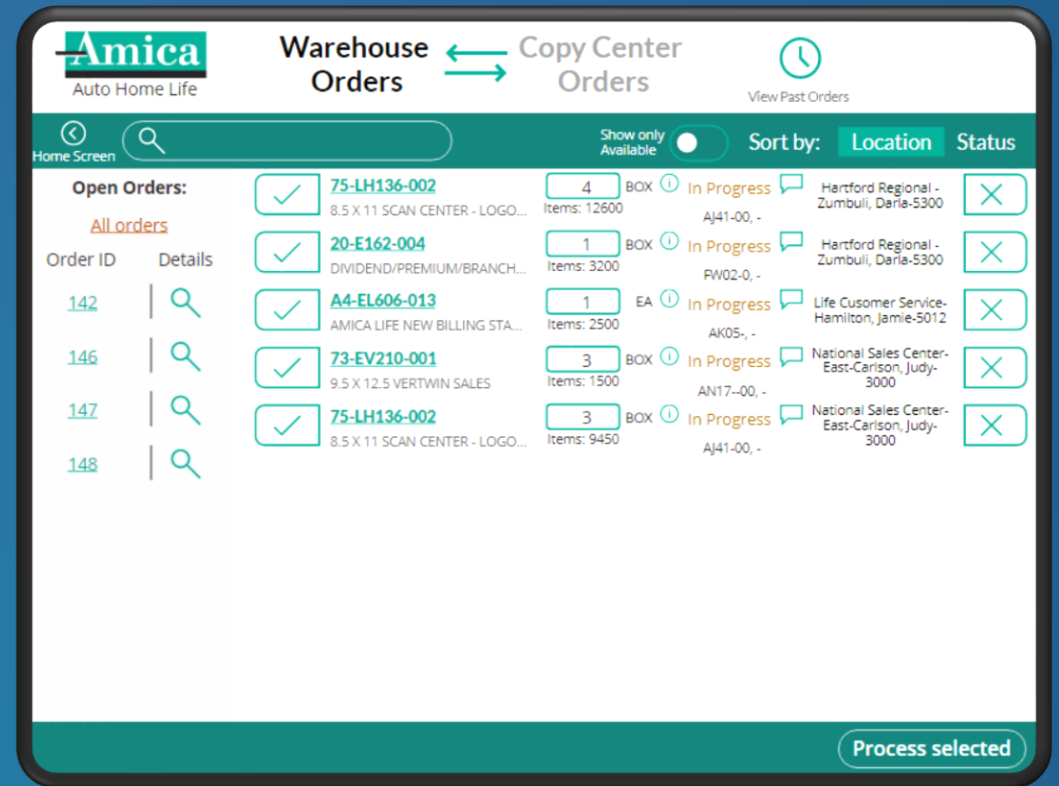

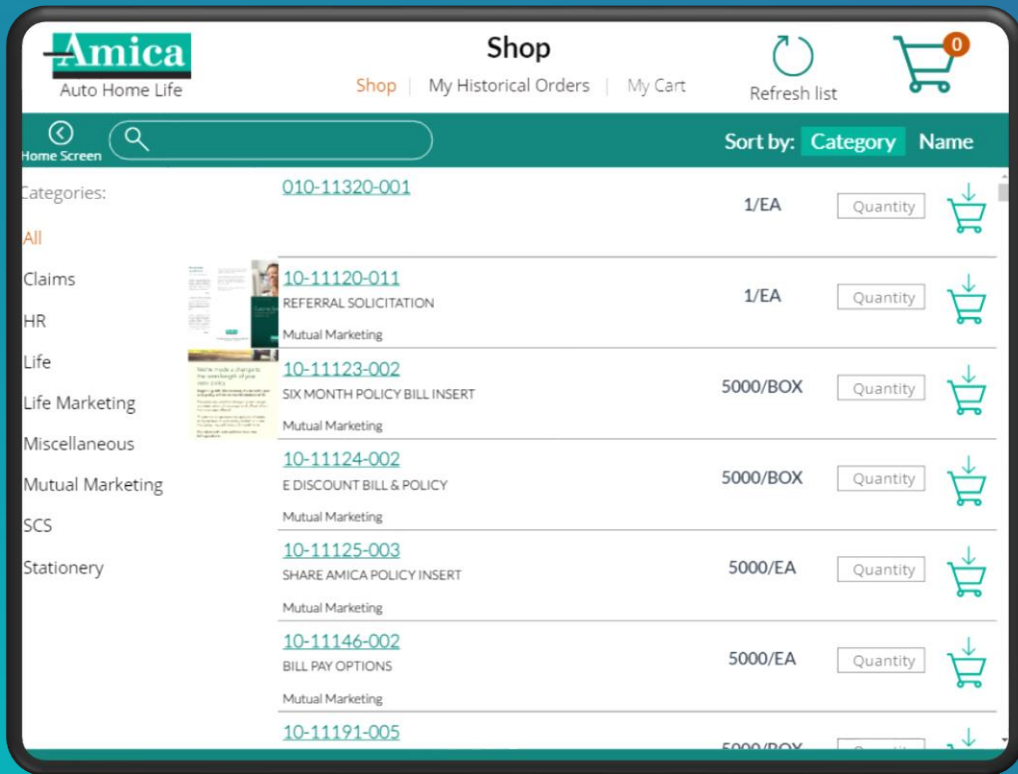

Shorter time Ticket Resolution

Increase in the number of requests in the organization

HDT Maturity Model

Pilot

Mastering

Mature

Discovering

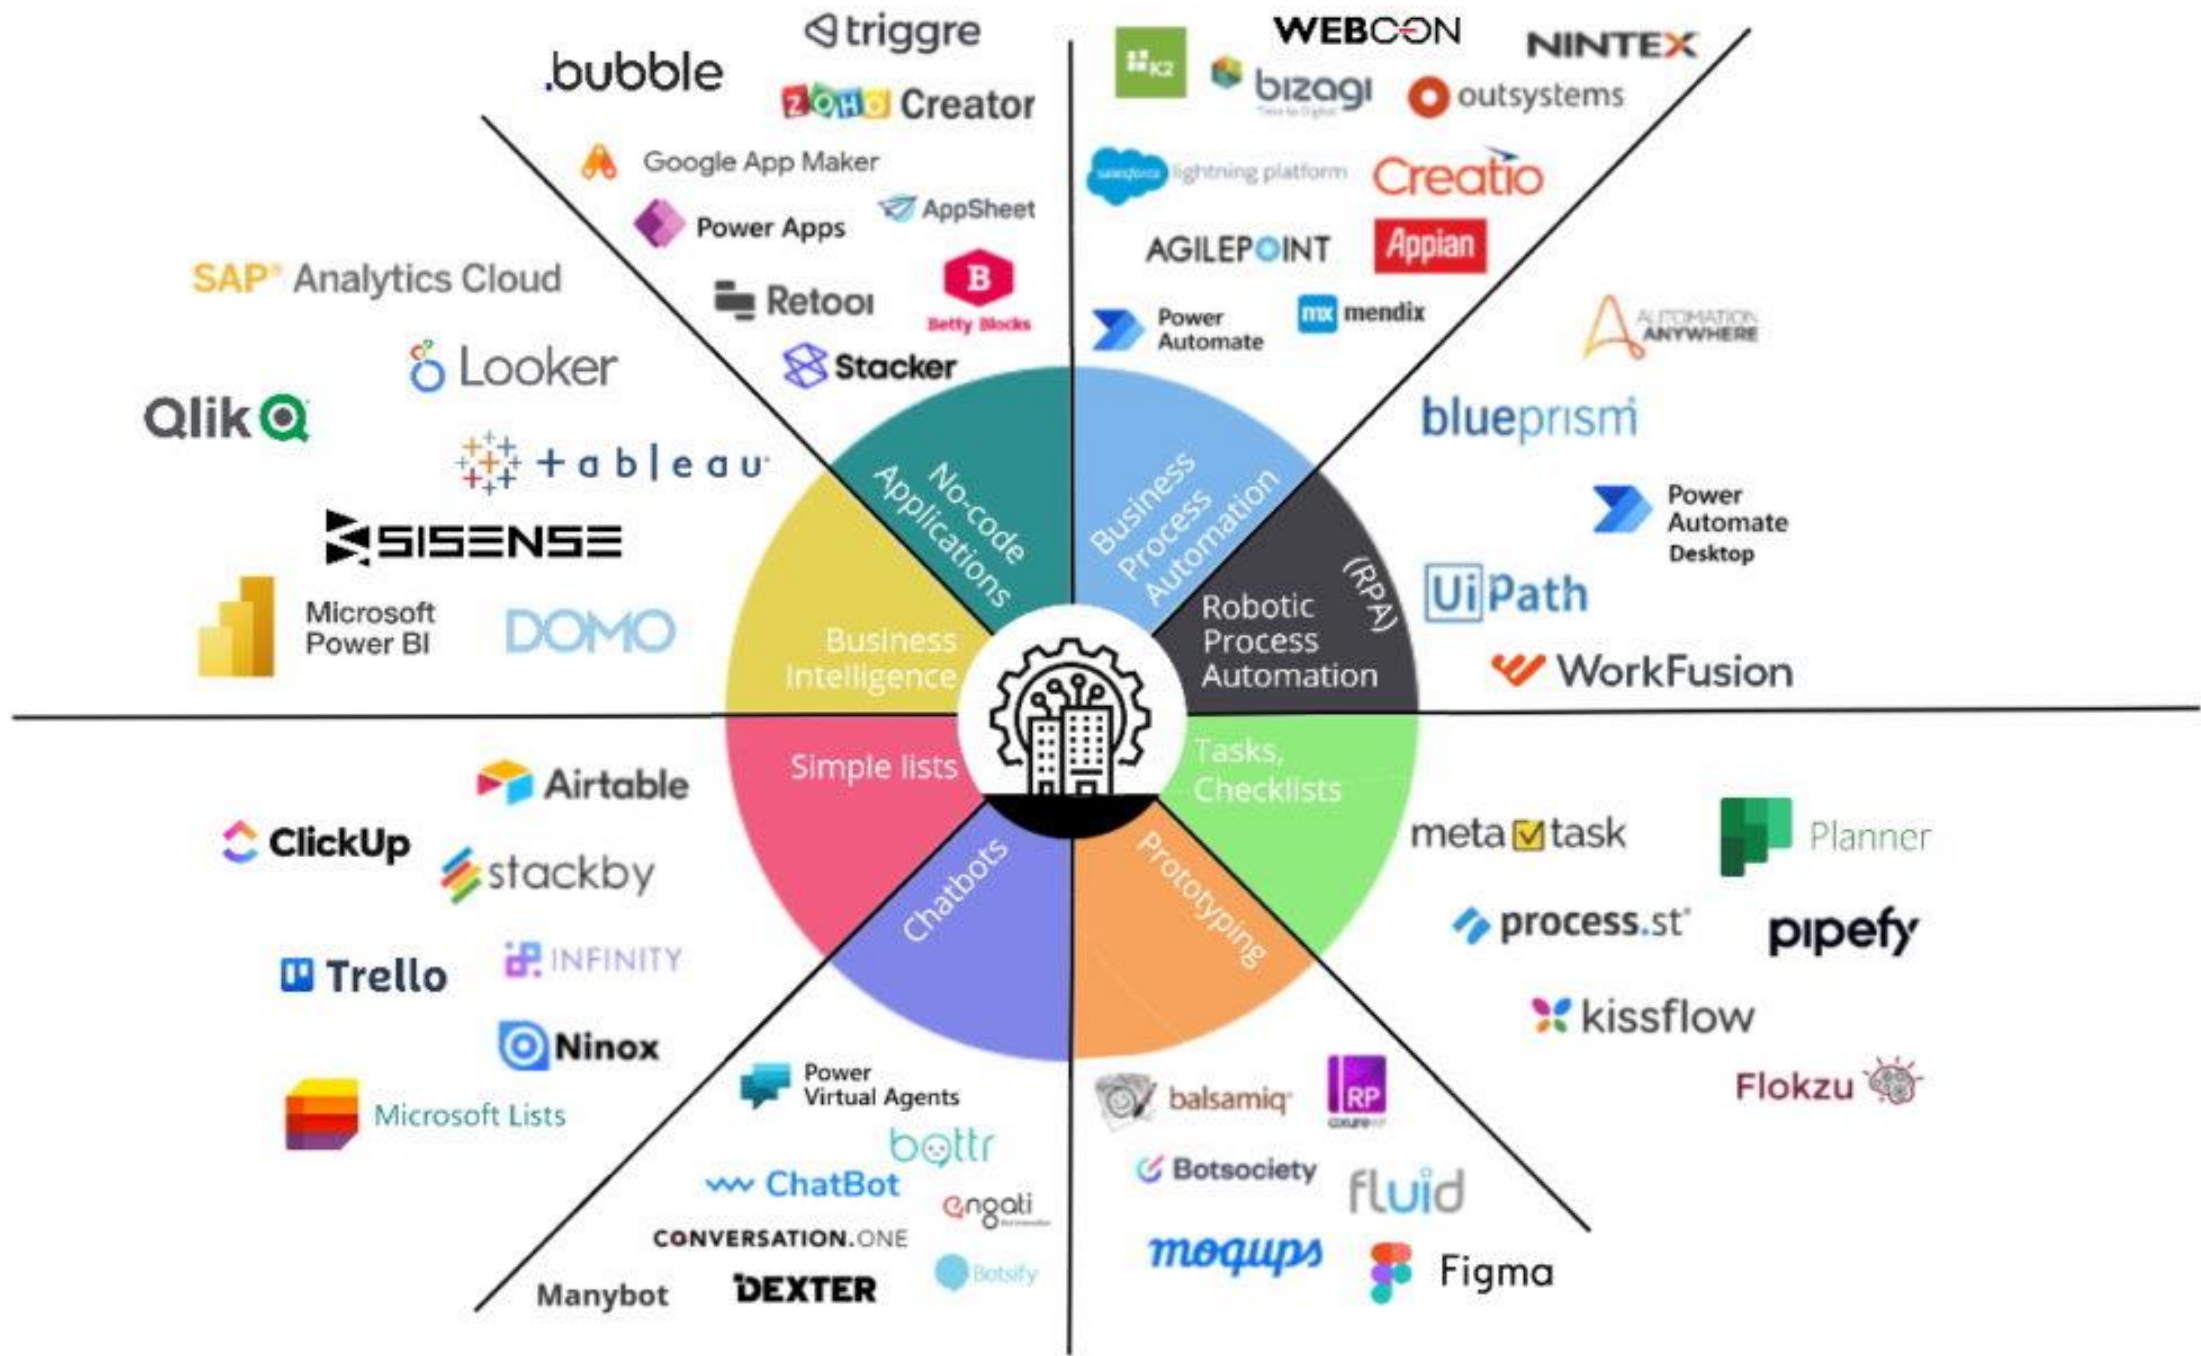

Action list

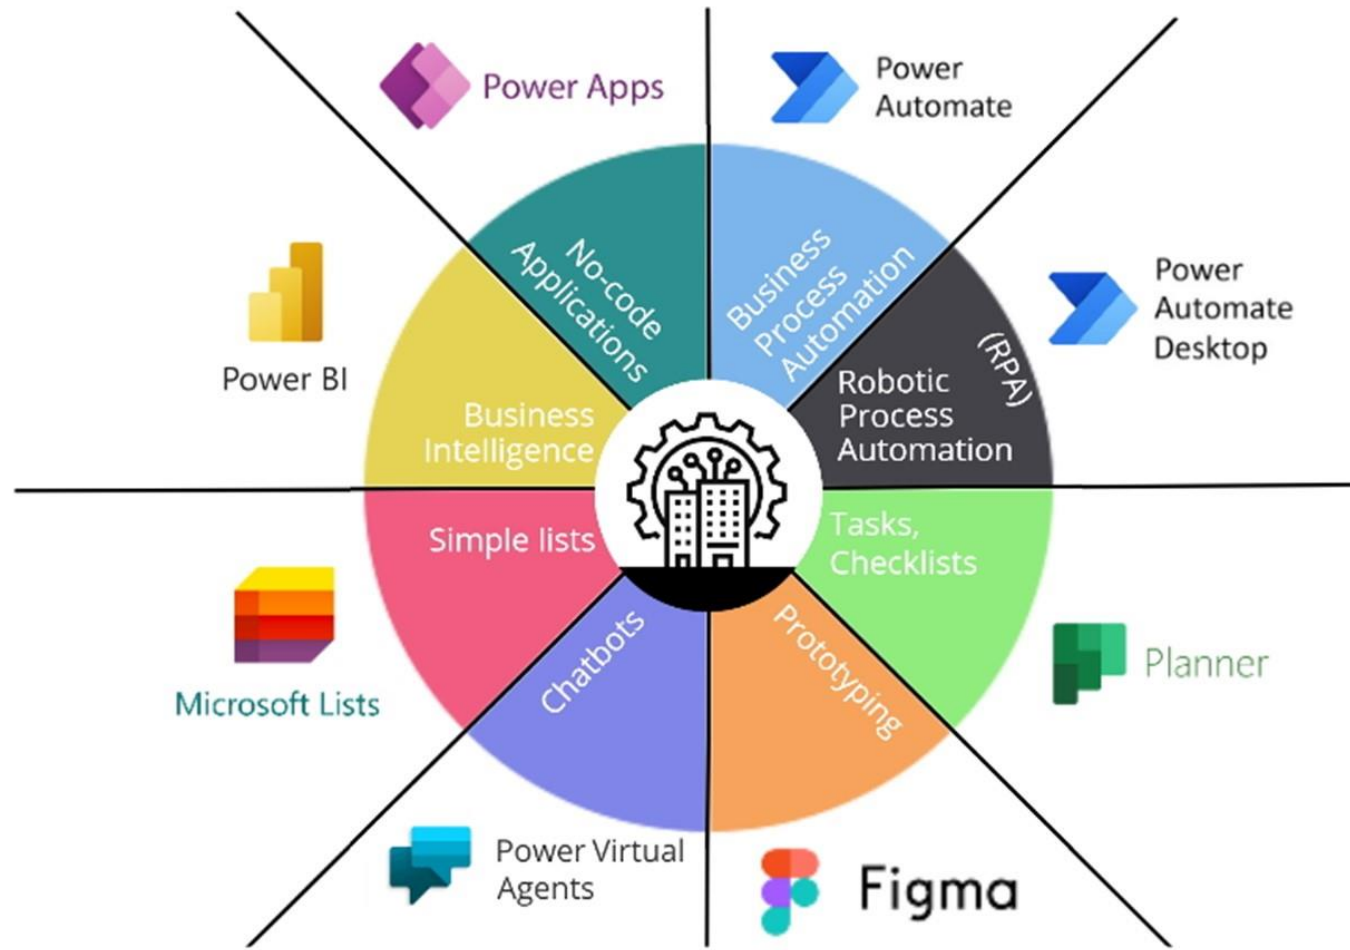

- Learn & Engage
- Demo
- Sign-up for trials
- Evaluate current tools

Questions

- What is No Code?
- Difference between No Code and Low Code?
- What is commonly used on the market?
- What is my company already using?
- Which low code platforms licenses we already have?
- To which low code platforms I have already access to?

Experimenting

Action list

- Learn & Engage
- Identify low-hanging fruits
- Select the right tools
- Fold your sleeves

Tools

- Intuition & Experience
- Self-management approach
- Prioritization Matrix

Questions

- What people complain about?
- What has the best value to effort ratio?

Differentiators

- Hyper Sprints
- Citizen Developers & Fusion Teams
- Platform-related best practices

Mastering

Mature

Probing

Tools

- Hyper Sprints
- RACI
- SMART KPIs
- MVP
- Prioritization Matrix

Action list

- Assign small budget
- Gather Team:
 - Process Owner
 - Digitalization Owner
 - **Citizen Development Expert**

Questions

- How can we systemically solve challenges
- What mechanisms are in place to ensure adherence to the newly created technical guidelines and standards?
- Where to take experienced platform specialists from?
- Are there any scalability concerns as we move from individual projects to a broader framework approach?

Hyper sprint

Outcomes

- Analysis of needs
- MVP implementation
- Business Value for future sponsor
- Pipeline identification
- Technology Verification

Schedule

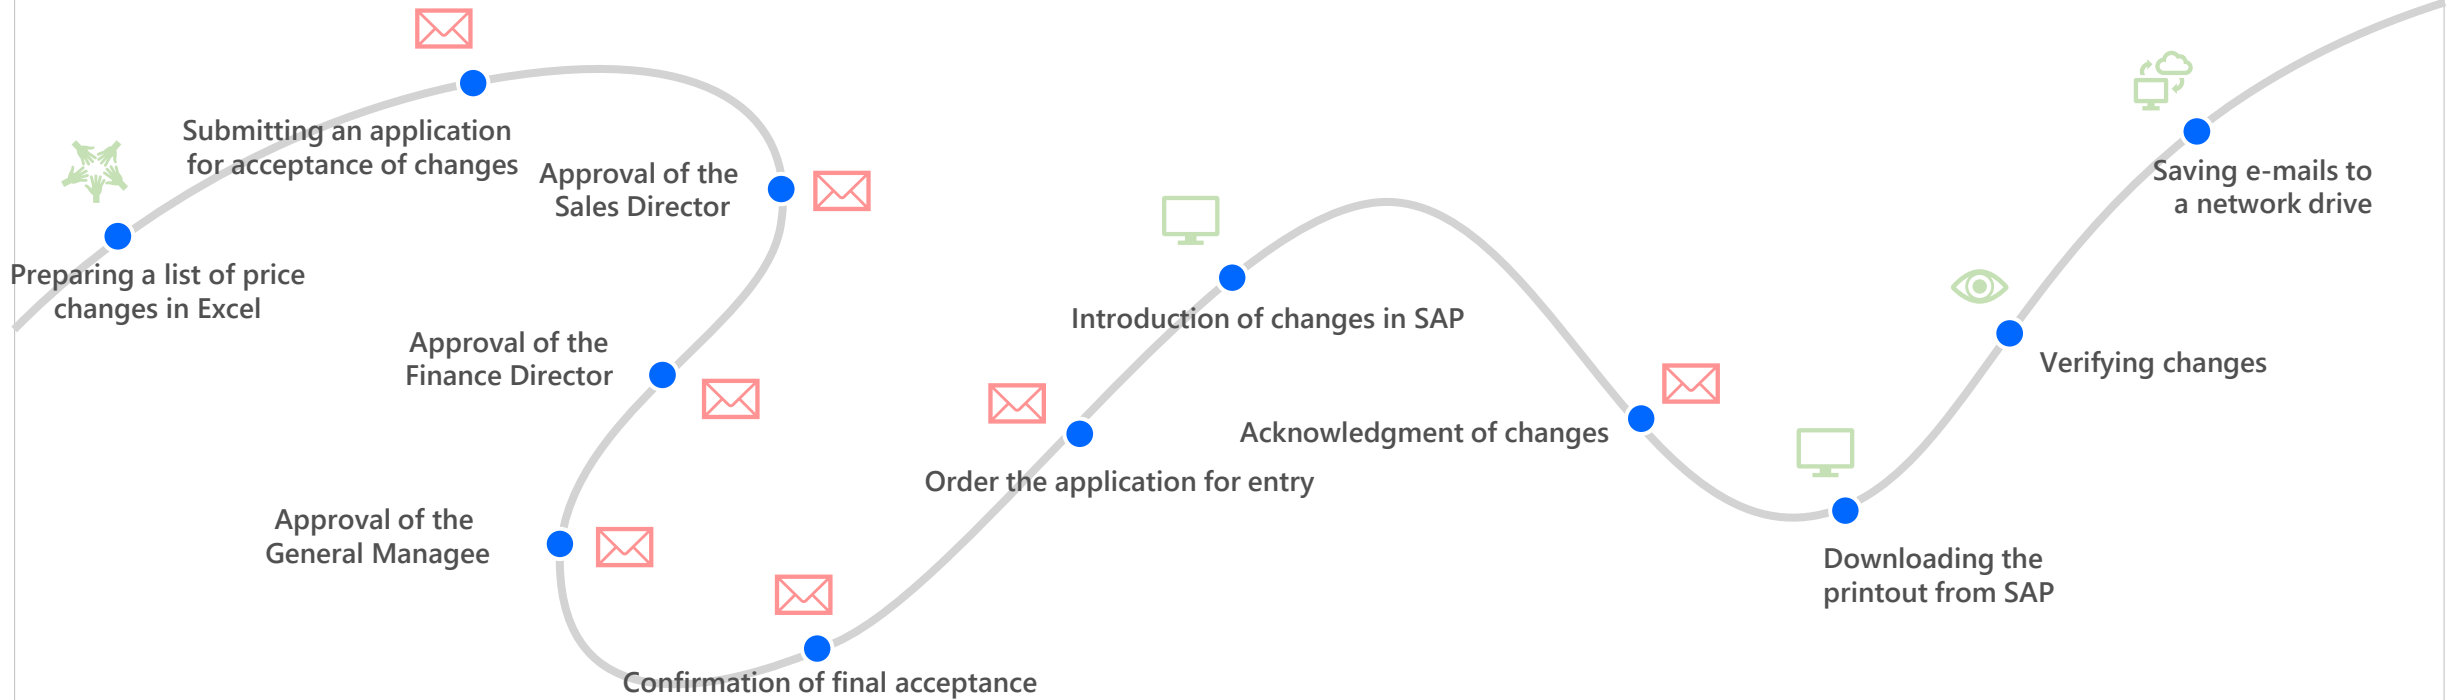

- **Monday:** Process analysis and selection of the scope of work.
- **Tuesday – Thursday:** Building an MVP, adapting to the client's specificity, reacting to changes and testing functionality.
- **Friday:** Finalization of MVP construction, gathering summary and discussion of next steps.

Goals

- Conducting Analysis
- Building an MVP
- Verifying tools & team
- "Blazing the Trail"
- Solution Guidelines:
 - Up to 8 data labels
 - Up to 5 screens, 50 controls each
 - Up to 5 flows, 20 actions each
 - Up to 20 documentation pages
 - Up to 20 summary slides

CURRENT STATE

WHAT WORKS

- Excel with changes has a standardized structure
- Ordered changes are implemented
- Archiving of made changes

CHALLENGES

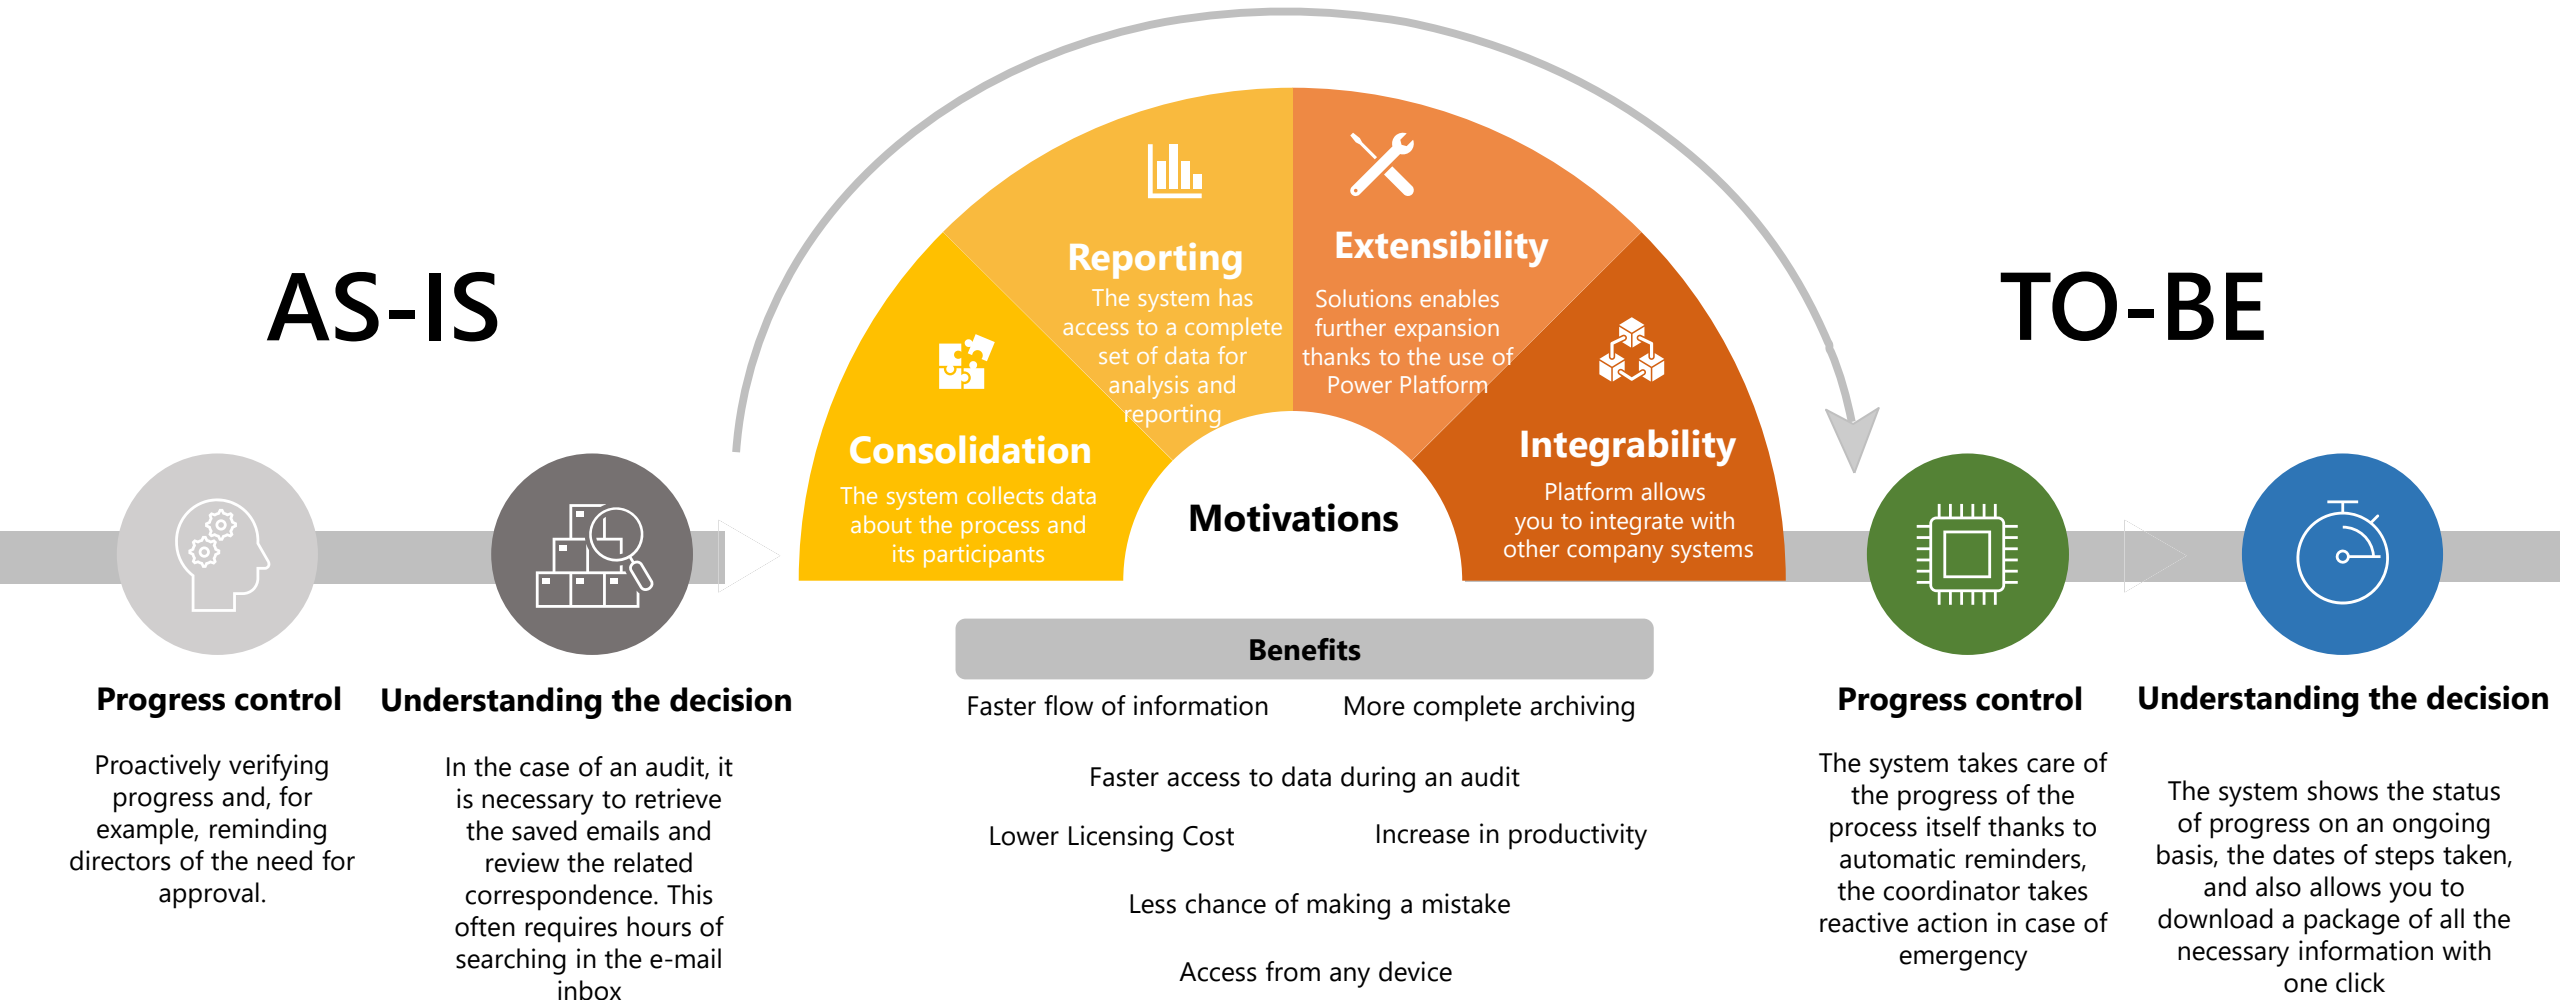

- Difficulty in determining the current status of the application
- Monitoring the progress of the application by the coordinator
- Inability to reconstruct the decision-making process

NEEDS

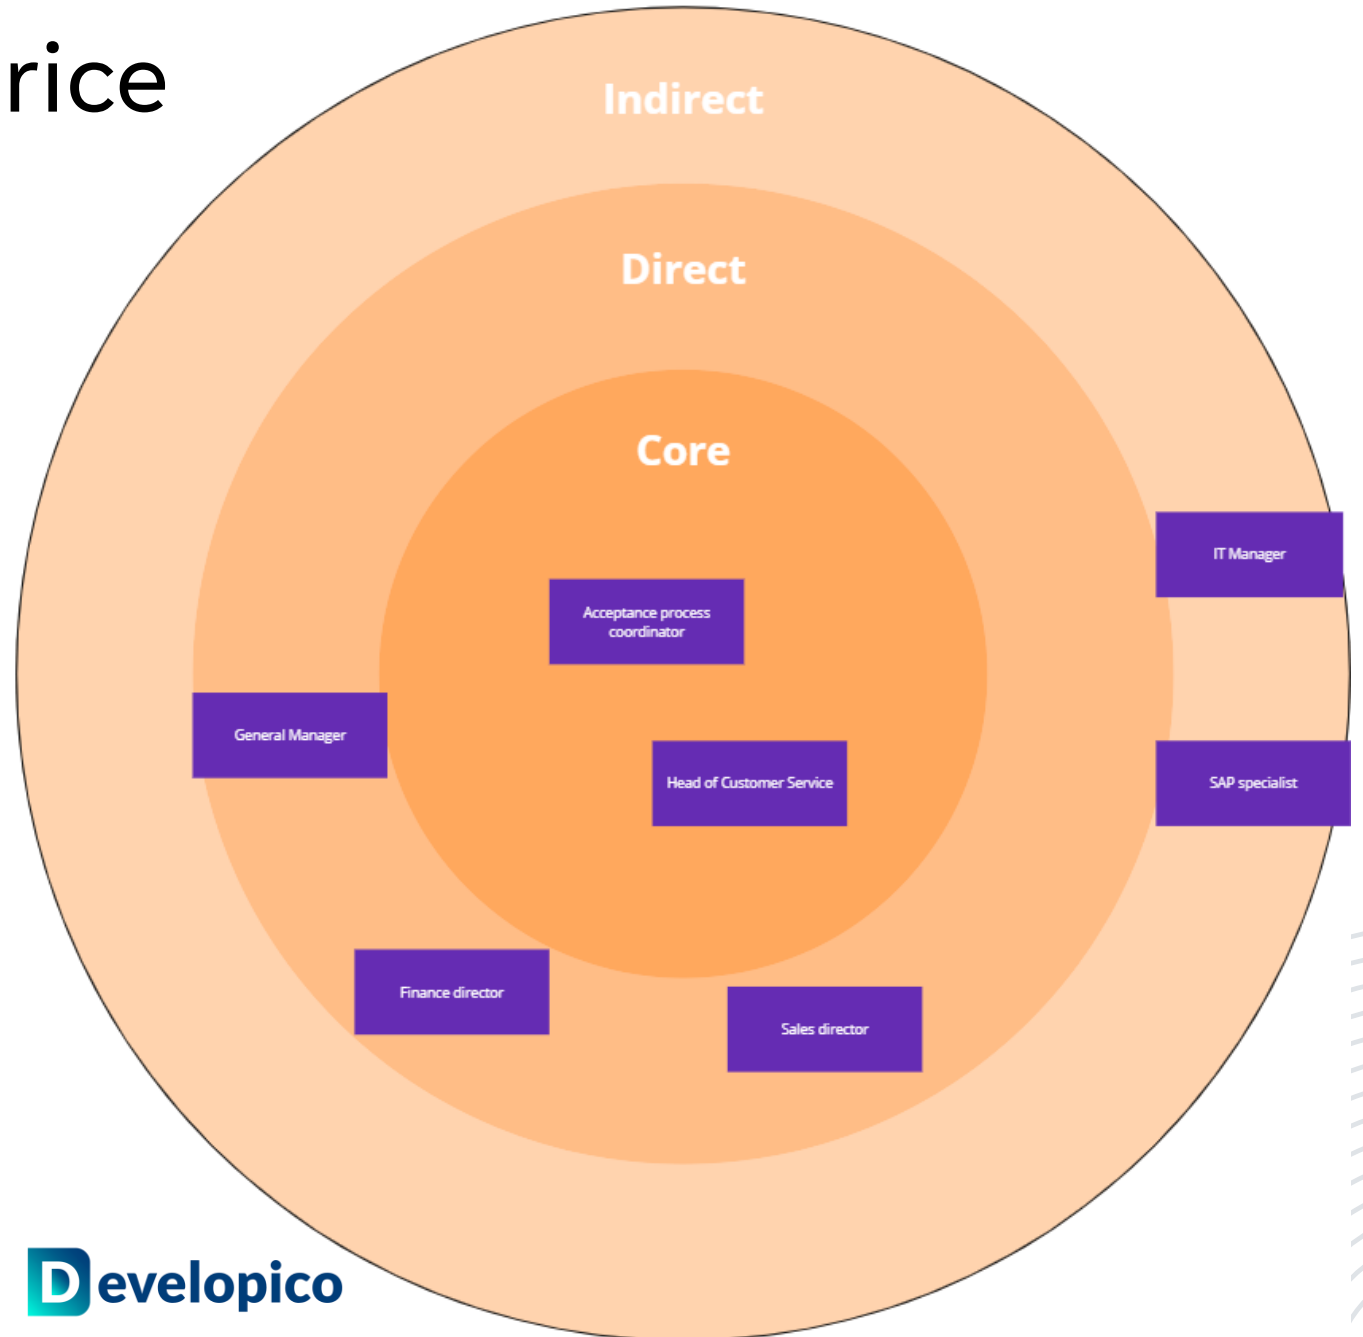

- Streamlining the flow of information
- Increase productivity
- Improving audit data acquisition
- Reduce the stress of the process

Forward

Business Value

Process Duration: 96 hours (of 480 hours per year)

- 75%

Time commitment 600 hours (out of 2,400 hours per year)

- 75%

Audit preparation time: 30 hours (out of 240 hours per year)

- 90%

Costs:Savings ratio

**ROI
300%**

Other benefits

RESOLVED NEGATIVE IMPACT

on audit preparation. Audit data is completed and stored on an ongoing basis and all information is available at hand

NO LICENSING COSTS

related to obsolete software (JIRA)

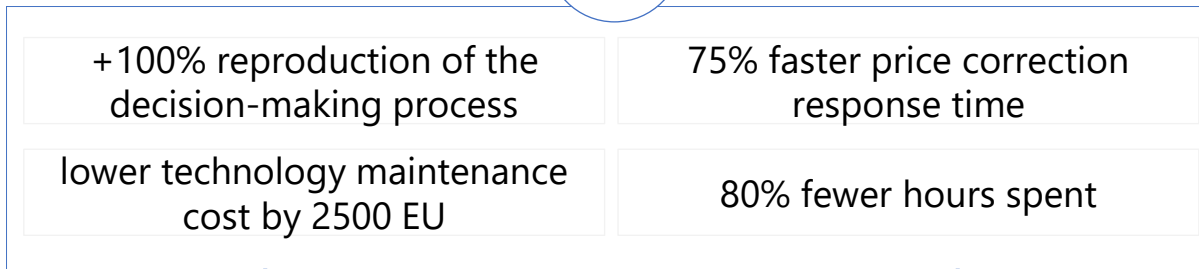

IMPROVED EMPLOYEES SATISFACTION

Fewer problems related to proactively monitoring the process, obtaining data for audit, understanding the process or maintaining it

Benefits

KPIs

Platforms

BUSINESS VALUE...

Lower process maintenance costs

Automation should translate into > PLN 100,000 in savings per year

ROI

300%

Business Resilience

Reduced time to price adjustments and audit readiness

Expandability

The Platform platform is already used in the HR department of Contoso. The platform allows for simple modification, integrates with any systems and is supported by the Microsoft ecosystem

Horizon and perspective

Step 1 Refinement

Goal: Implementation of the final version of the price acceptance process in Power Platform, cooperation with the HR department, education

Time: 1 month, value in 1 month

Step 2 More Hyper Sprints

Goal:
<benefits> & <KPIs>
for further ideas
Automating subsequent processes, gathering arguments for digital transformation in the organization using M365 and Power Platform

Time: 1 – 2 months, value in 2 months

Faza 3 Governancing

Goal: Mature HDT
Automate Professionalize your team to digitize processes, manage and control all Platform solutions in your organization

Time: 6-12 months, value in 3 months

Phase	Recommendations
Refinement	<ul style="list-style-type: none"> • Technology & Licensing Decision • Coverage of out-of-scope functionality (trade-offs) • Implementation, Adoption and Stabilization
More Hyper Sprints	<ul style="list-style-type: none"> • Building case studies showing measurable benefits for the organization • Co-packing • Contract Acceptances • Quality questionnaires • Simplify invoicing • Stakeholder radar • Integration with legacy systems • Meetings to identify "low-hanging fruits" (internal marketing)
Mastering	<ul style="list-style-type: none"> • Implementation of the Platform Center of Excellence • Facilitating the generation of needs in the organization • Determination of the Spot Assessment Grid and questionnaires • Launch Process Mining • Creation of the Hyper Digital Transformation team • Identification of Citizen Developers and IT engineers • Platform training • Building a Knowledge Base

Updating assessments

1. Current state/situation

Let's talk about your current state. What does your world look like today and what's not optimal that you want addressed?

2. Future state

What does we want our world to look like tomorrow? What are some of your top objectives and critical business outcomes that you want to see realized?

3. Bridge

What steps are you currently taking or planning on taking to get to that future state?

4. Why now?

What is at stake or the condition that requires action now? Is there any urgent or important events or dates we need to be aware of or consider as we move forward?

5. Define success

What is the expected outcome to achieve this vision? What does success look like when this is in place? By when do you want this outcome to occur?

6. Declare challenges

What challenges currently stand in the way? What has or will hold us back from being successful in achieving those goals?

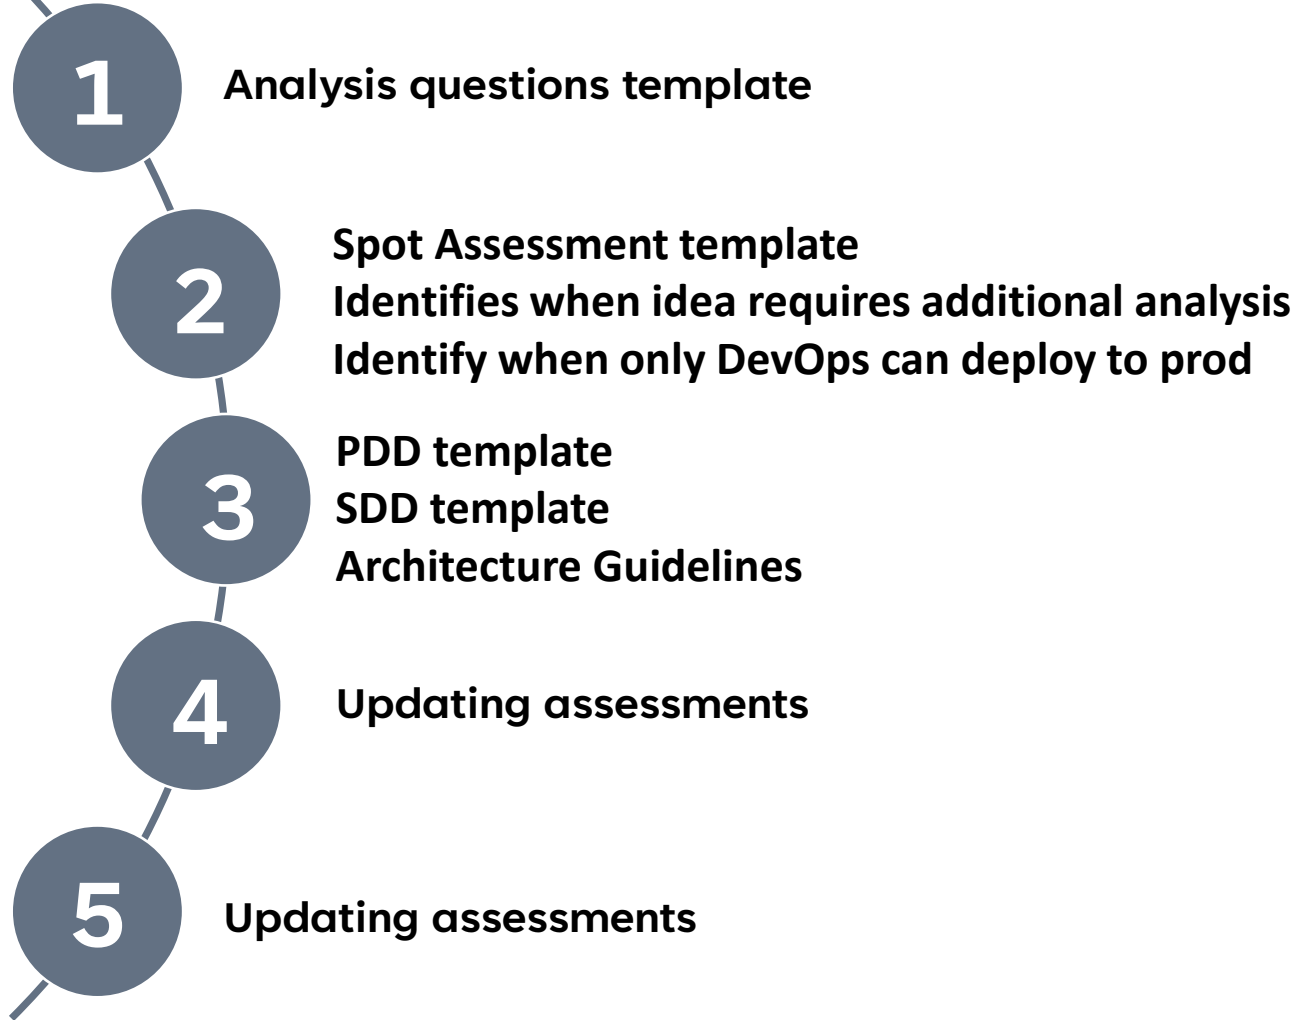

7. Stakeholder groups

Who are the groups of people that should be included in working on a solution around this? Or who needs to be informed or updated about this is we do something?

8. Concerns/Questions

If we do this workshop, do you have any concerns or questions that we should be aware of?

ASSESSMENT MANAGEMENT

Risk category	Description	Mark
Security	<p>Potential breaches of confidentiality, data loss, and uncontrolled user access.</p> <ul style="list-style-type: none"> • Low risk: There is low exposure to any of the mentioned items. • Medium risk: The potential risks can be mitigated if an expert is brought on board. • High risk: Citizen development is not the idea solution given the high-security risks. 	
Operational IT	<p>Acceptable rules to create, manage, maintain, and use IT.</p> <ul style="list-style-type: none"> • Low risk: The application can be easily created, managed, maintained, and used according to the organizations IT standards. • Medium risk: The application can comply with operational IT requirements if an expert is involved. • High risk: Some of the conditions can't be met using citizen development. 	
IT Architecture	<p>Rules to build, modify, and interface IT resources.</p> <ul style="list-style-type: none"> • Low risk: The project does not negatively affect other systems or require extensive integration with the wider organizations environment. • Medium risk: Some complex integration can be required; therefore, external help is needed. • High risk: The project requires extensive integration with other systems or affects the wider organizations environment. 	
Regulatory	<p>External laws, industry standards, or compliance requirements.</p> <ul style="list-style-type: none"> • Low risk: There is low exposure to any of the mentioned items. • Medium risk: Citizen development can comply with regulatory requirements, but needs the involvement of an expert. • High risk: Citizen development is not the idea solution given the high level of regulatory risk. 	
Reputational	<p>Potential loss of brand perception, social capital, or market share.</p> <ul style="list-style-type: none"> • Low risk: There is a low risk to the organization's reputation as the app doesn't use sensitive data or negatively affect third parties, following accepted social guidelines. • Medium risk: There is some reputational risk associated with the app so an expert must be brought in to ensure the risk is mitigated. • High risk: There is high reputational risk due to highly sensitive data being processed and/or the app being a key-way in which an organization interacts with their customer. 	
Financial	<p>Potential impact on revenue.</p> <ul style="list-style-type: none"> • Low risk: The app has little to no impact on the business processes that impact the revenue of products and services or costs of producing them. • Medium risk: There is some impact on the volume and pricing of products and services or the cost of producing them. • High risk: There is a strong impact on the volume and pricing of products and services or the cost of producing them; therefore, a greater level of IT governance is required.

COMPLIANCE

The screenshot shows the PowerApps compliance interface for an application named "Northwind Orders (Canvas) - Begin Part 1". The interface is divided into several sections:

- Navigation:** A left sidebar contains navigation options: Recent, Finned, Monitor, Overview Dashboard, Apps, Flows, Environments, Connectors, Chatbots, UI Flows, Audit Logs, People, Makers, Power Platform Users, CoE Settings, and Configure.
- App Details:** The main area displays details for the app, including App Environment (PowerApps), App Type (Canvas), SharePoint Form URL, App Description, App Shared Users (0), App Shared Groups (0), App Modified On (3/30/2020 3:42 PM), App Created On (3/30/2020 3:42 PM), and App Published (3/30/2020 3:42 PM).
- Compliance Progress:** A progress bar at the top shows the app is in the "Validate Maker Business Requirements (14 D)" stage, which is active for 14 days. Other stages include "Assess Risk" and "Highlight App in Catalog".
- Checklist:** A checklist titled "Check if Maker Provided Business Requirements" is shown, with a "No" status and a "Next Stage" button.
- APP SHARED WITH (LIST):** A table showing the app is shared with one user: Lee Gu, User, 1 Owner.
- APP SHARED WITH:** A bar chart showing the total number of users the app is shared with, with a value of 1.

1

Ocena bieżącego wykorzystania licencji i potrzeb

2

Opracowanie opłacalnego planu licencjonowania

3

Wdrożenie monitorowania zgodności i optymalizacji

"W jaki sposób obecnie zarządzasz i optymalizujesz wykorzystanie licencji Power Platform?"

- Oszczędność kosztów dzięki optymalizacji wykorzystania licencji o 20%
- Redukcja niewykorzystanych licencji o 40%

Scaling

Action list

- Improve governance and monitoring
- Seek for business needs
- Organize funding for your initiatives
- Get recognized
- Identify Citizen Developers
- Facilitate low code learning in Citizen Developers and IT

Tools

- Power Platform Center of Excellence Kit
- DevOps pipelines
- Microsoft PL–X00 Exams
- Areas recognition
- Teaching skills
- Pitching skills
- Risks management strategy
- Change management strategy

Questions

- How do we assess whether projects should be delivered using No Code, Low Code or Pro Code?
- How do we want to organize our Low Code environments?
- What is the best Citizen Developer Profile?
- How do we measure our initiatives
- What are the potential risks of scaling CD, and how are we mitigating them?
- What is the long-term vision for Citizen Development in the organization?

1

Określenie kluczowych ról i obowiązków

2

Określenie licencji i dostępów potrzebnych każdej z ról

3

Regularny przegląd i dostosowywanie struktury zespołu

„Jakie role biorą domyślnie udział przy projektach Power Platform?”

- Oszczędność kosztów dzięki optymalizacji wykorzystania licencji o 20%
- Redukcja niewykorzystanych licencji o 40%

WHAT IS THE CONCEPT CALLED?		
WHO IS IT FOR?	WHAT PROBLEM DOES IT SOLVE?	WHAT IS THE BIG IDEA?
ILLUSTRATE HOW IT WORKS?		
WHY MIGHT IT FAIL?	WHAT SHOULD WE PROTOTYPE & TEST?	HOW MIGHT WE MEASURE SUCCESS?
HOW WILL WE MAKE THIS HAPPEN?		

WHAT IS THE CONCEPT CALLED?

Customer Personal Shopper

How might reduce wait time of our customers in a store

WHO IS IT FOR?

Customers

Store Associates

WHAT PROBLEM DOES IT SOLVE?

Reduce customers wait time	Reduce lines	Increase total item
Store and drive through over crowded at pick hours	Optimize flow	
	Reduce amount of people in store	

WHAT IS THE BIG IDEA?

Order wherever and whenever they want

Come to the store to pick up

Ready so they can sit and enjoy without waiting

WHY MIGHT IT FAIL?

Discoverability of the App

Data Privacy

Ease of use

Integration with Store Systems

WHAT SHOULD WE PROTOTYPE AND TEST?

Simple App to start with

Simple order online to pick up in store pilot

HOW MIGHT WE MEASURE SUCCESS?

# of orders per day	Revenue Impact	Incremental customer & revenue
Customer satisfaction	Store Experience	Pick up experience
Employee experience	Unexpected benefits	Adoption / reuse

Scaling

Scaling

Power Platform
Scaling Phase
Cheat Sheet

1

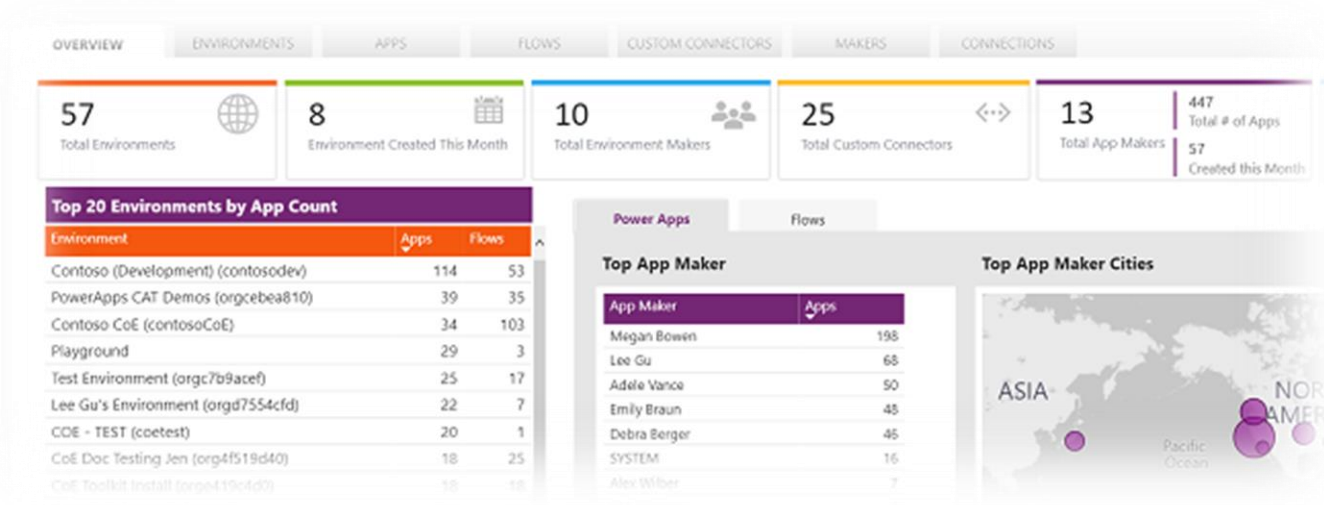

Define criteria for environment requests

2

Implement a request portal or form

3

Establish review and approval workflows

Understand how a structured process for requesting new environment instances enhances governance and compliance.

- Compliance rate increase to 95%
- Unauthorized changes reduced by 50%

Governance and Compliance

Administration, Governance, and Support

1

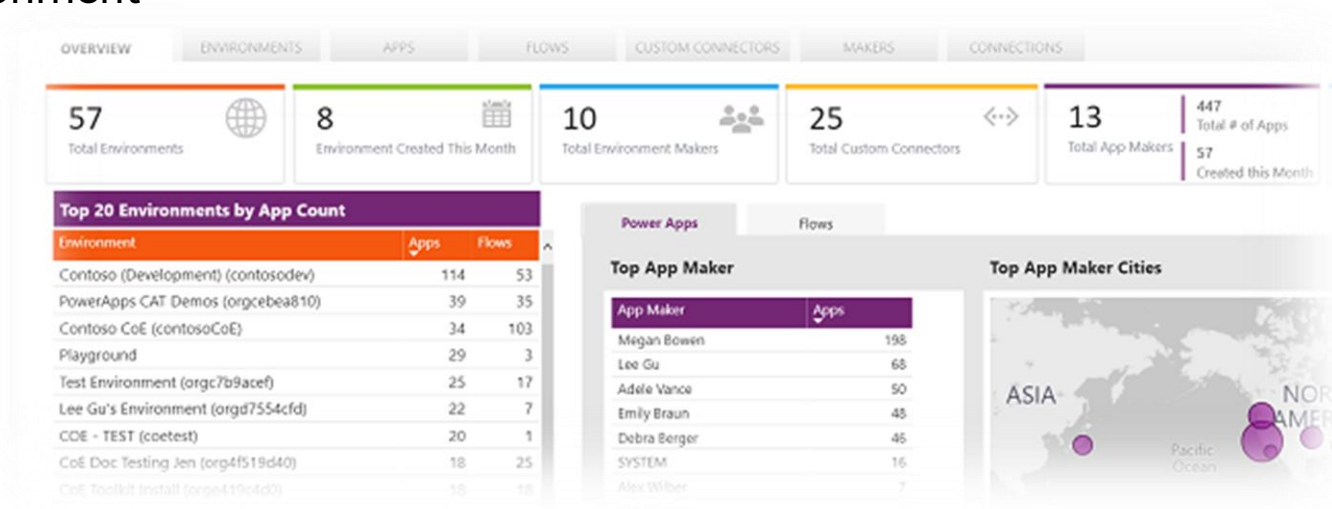

Audit the current state of the default environment

2

Define usage policies

3

Monitor and enforce compliance

Recognize the importance of managing the default or primary environment for governance and compliance.

Environment Management

Administration,
Governance,
and Support

1

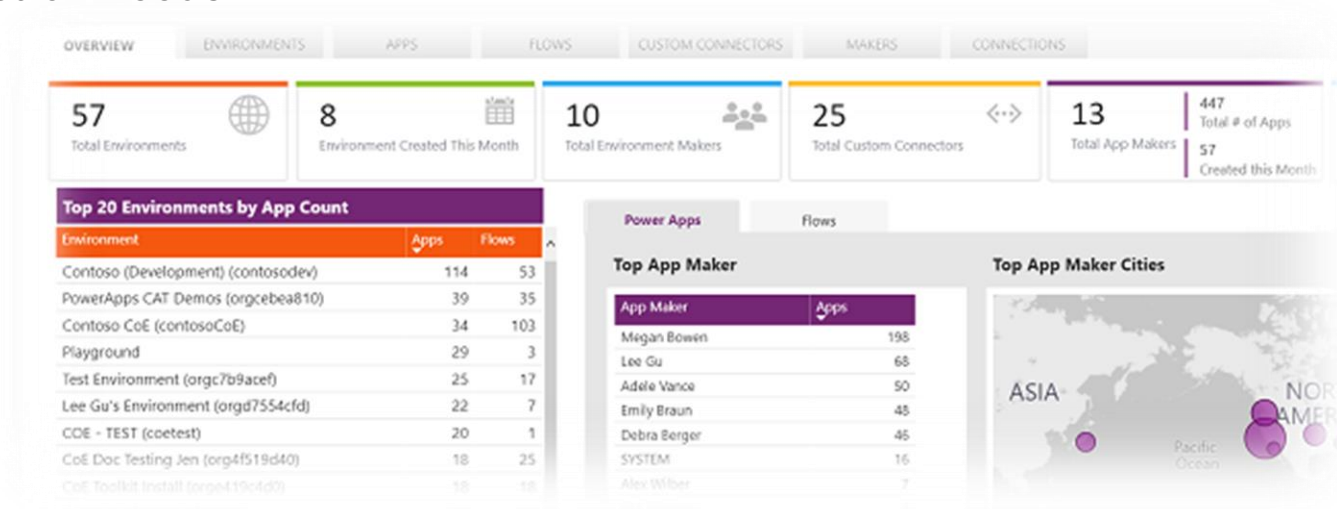

Identify development, testing, and production needs

2

Create environment templates

3

Establish governance policies

Develop an environment strategy for efficient processes and compliance.

Strategy Development

Administration,
Governance,
and Support

1

Identify repetitive administrative tasks

2

Select or develop planning and automation tools

3

Implement and monitor automation workflows

Utilize administrative planning tools to automate tasks and streamline workflows

Administrative Efficiency

Administration, Governance, and Support

1

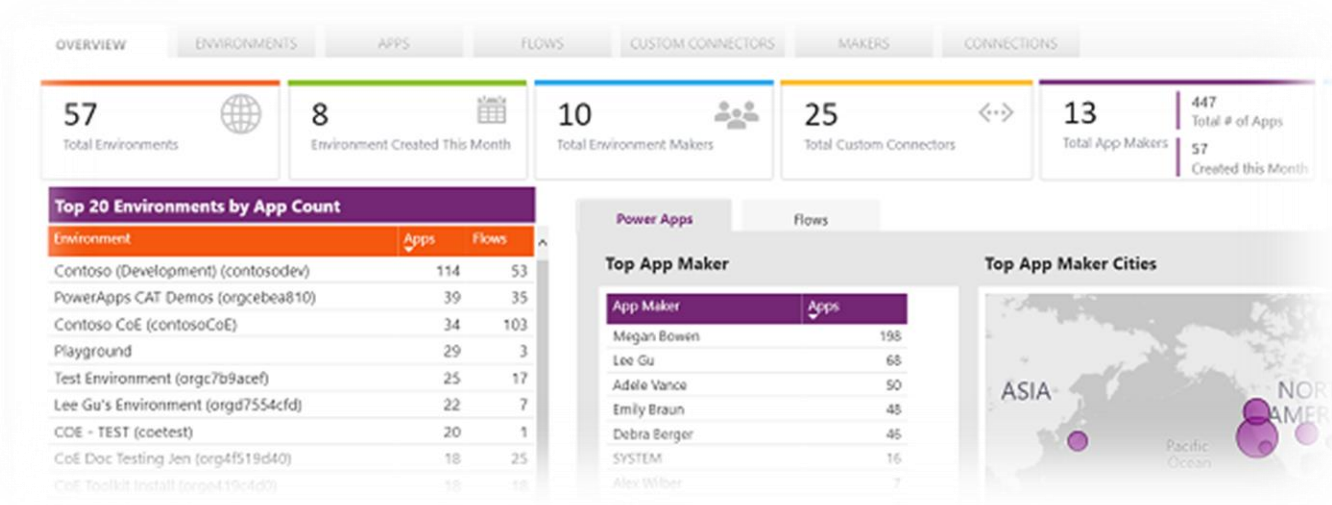

Evaluate platform management tools

2

Implement scalable management practices

3

Train admins on scalability features

Explore features for scalable management with more control and insights

Scalable Management

Administration, Governance, and Support

1

Define ALM processes and tools

2

Train team on ALM best practices

3

Implement version control and continuous integration/deployment

Emphasize ALM's significance in delivering high-quality applications

Application Lifecycle Management

Administration,
Governance,
and Support

1

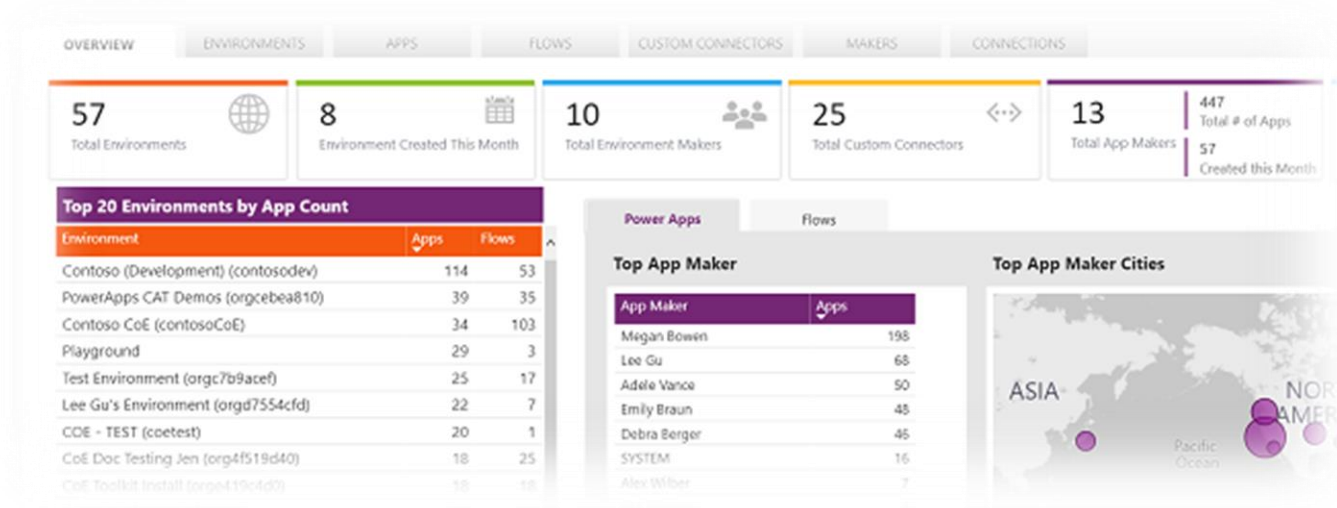

Define administrator roles and responsibilities

2

Provide training on governance and management tools

3

Establish a communication channel for admins

Appreciate the critical role of administrators in platform management

Role of Administrators

Administration,
Governance,
and Support

1

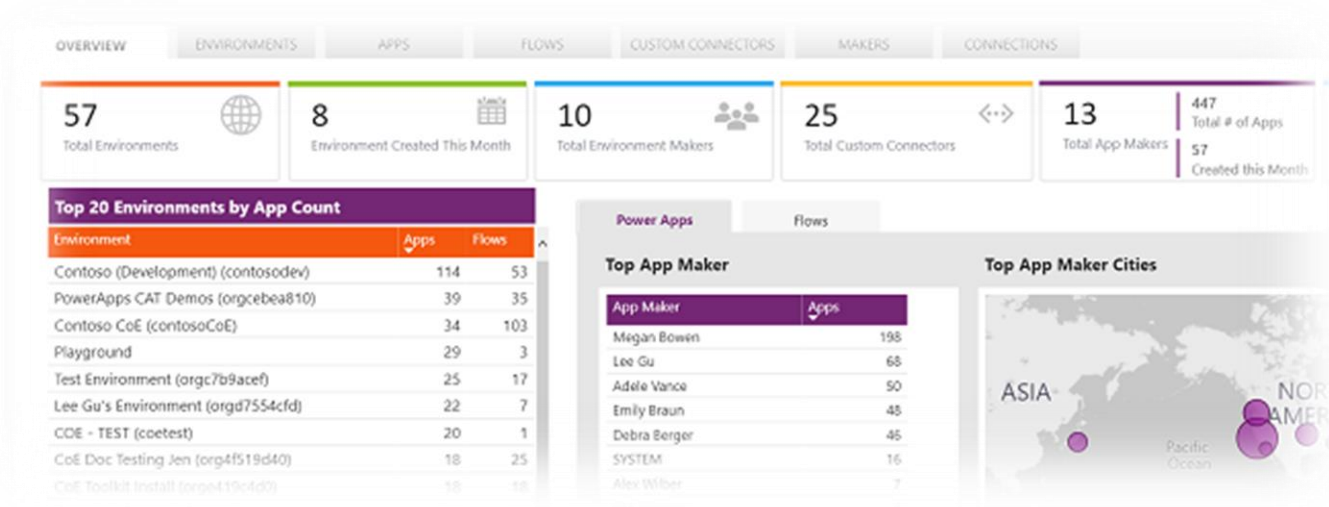

Select a maturity model framework

2

Conduct initial maturity assessment

3

Plan improvement actions based on assessment

Consider adopting a maturity model for support capability assessment

Maturity Assessment

Administration,
Governance,
and Support

1

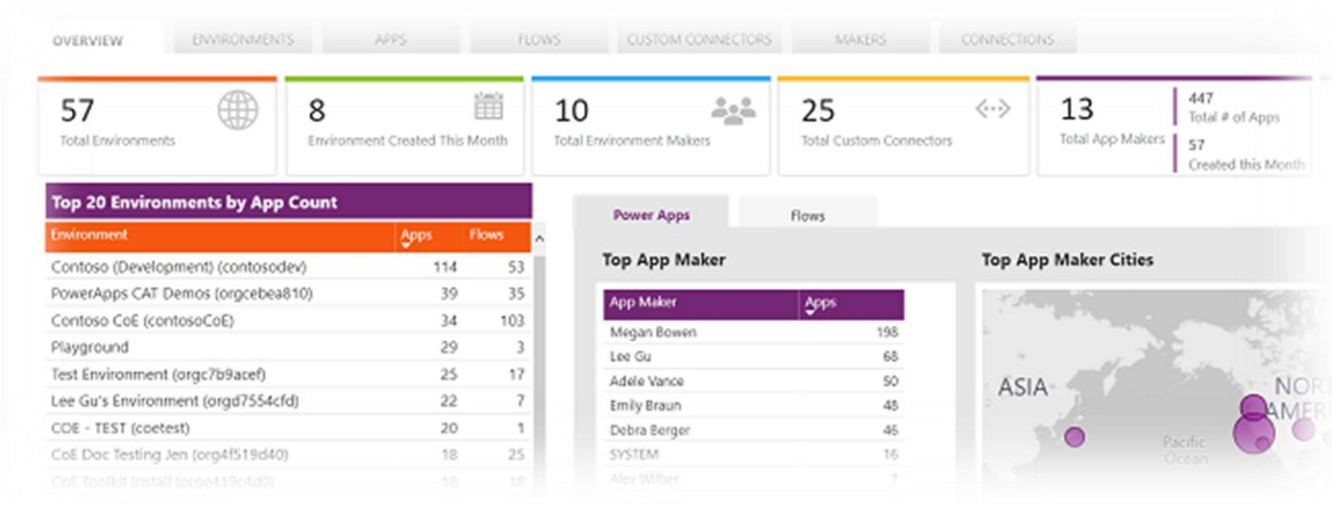

Identify areas needing productivity improvements

2

Select and implement productivity tools

3

Monitor and refine tool usage

Leverage productivity tools to enhance platform productivity

Productivity Enhancement

Administration, Governance, and Support

1

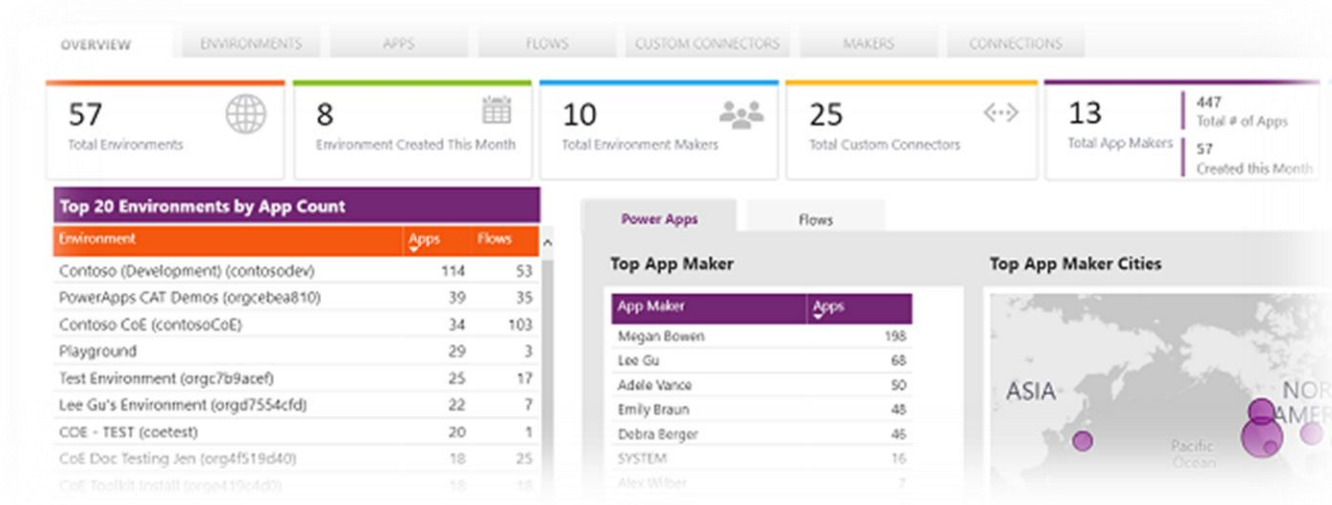

Compile existing troubleshooting resources

2

Develop a repository structure

3

Train team on using and contributing to the repository

Maintain a troubleshooting resource repository for optimal performance

Troubleshooting

Administration,
Governance,
and Support

1

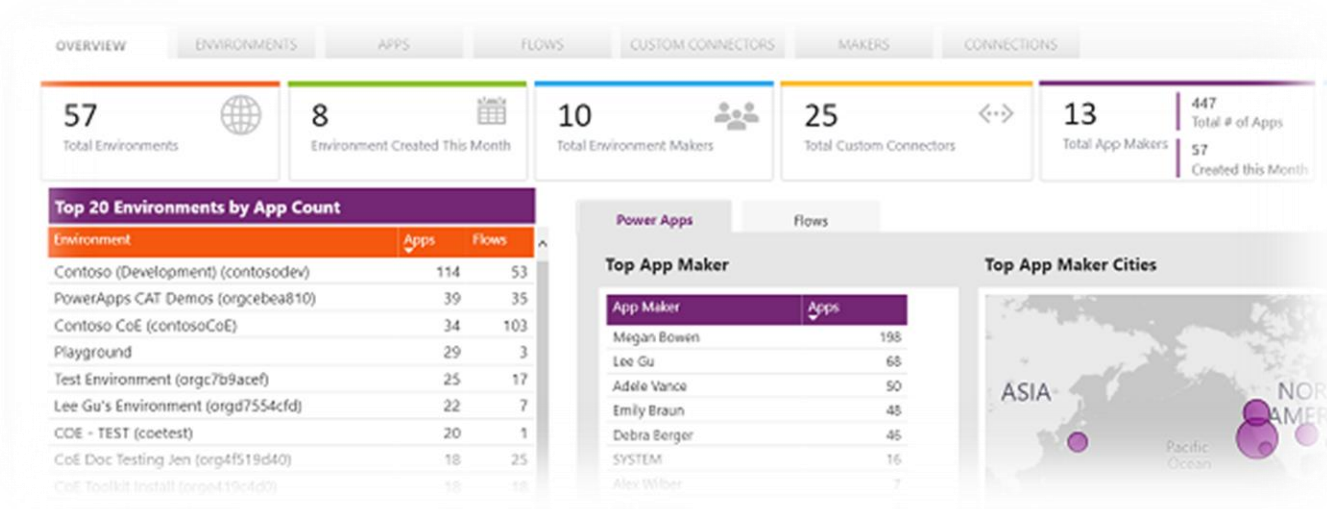

Identify relevant certifications

2

Plan training or study schedules

3

Register for certification exams

Pursue platform-specific certifications to validate skills and advance careers

1

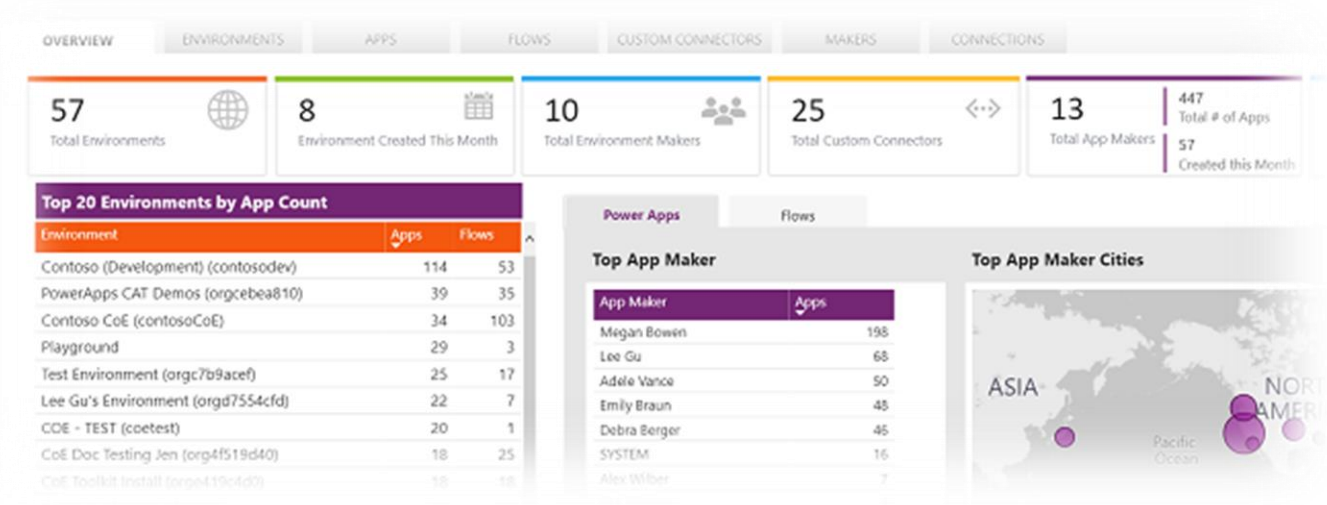

Define support tiers and responsibilities

2

Develop a knowledge base for common issues

3

Implement a ticketing system for support requests

Implement a user and solution support strategy

1

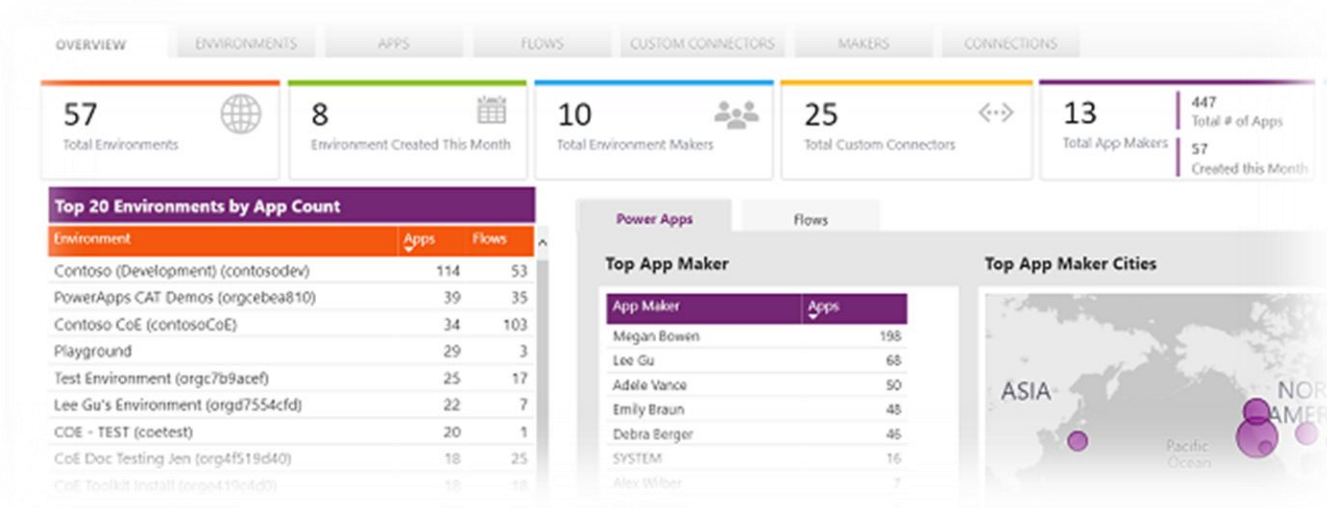

Identify key business objectives

2

Map learning initiatives to these objectives

3

Implement and track learning outcomes

Align learning initiatives with business objectives for performance improvements

1

Plan and schedule a hackathon event

2

Define challenges and goals

3

Provide resources and support for participants

Encourage hackathons for innovation and rapid prototyping

1

Collect success stories within the organization

2

Develop a platform for sharing these stories

3

Regularly update and promote new stories

Share success stories to inspire and motivate

Motivation and Inspiration

Nurture and Adoption

1

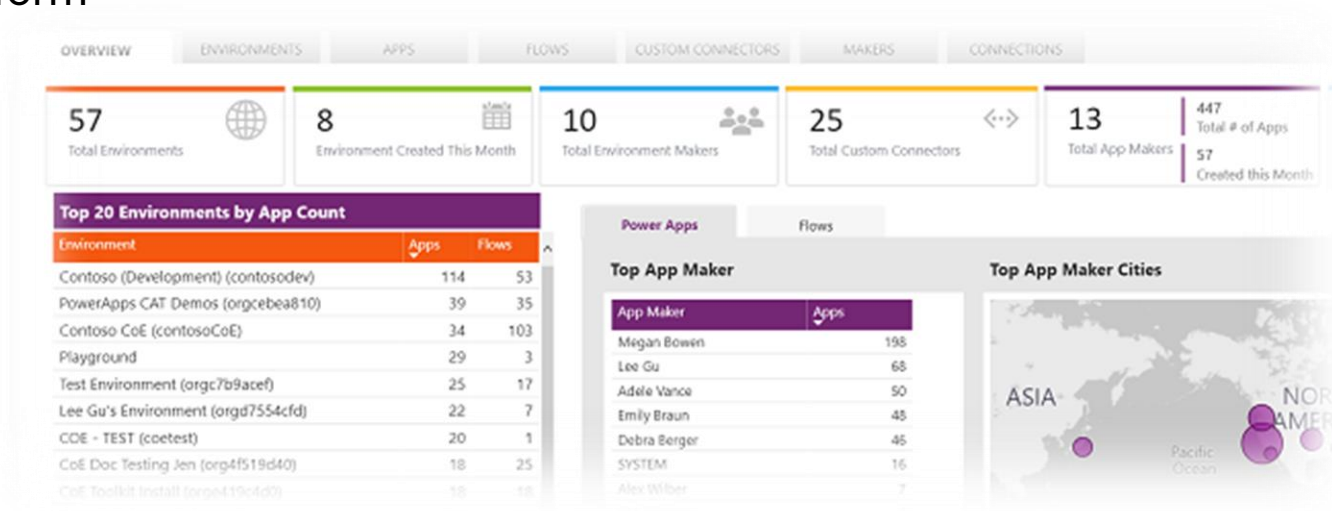

Research certifications relevant to the platform

2

Offer support and resources for certification preparation

3

Recognize and reward certification achievements

Explore certification options for developers and IT professionals

Professional Development

Nurture and Adoption

1

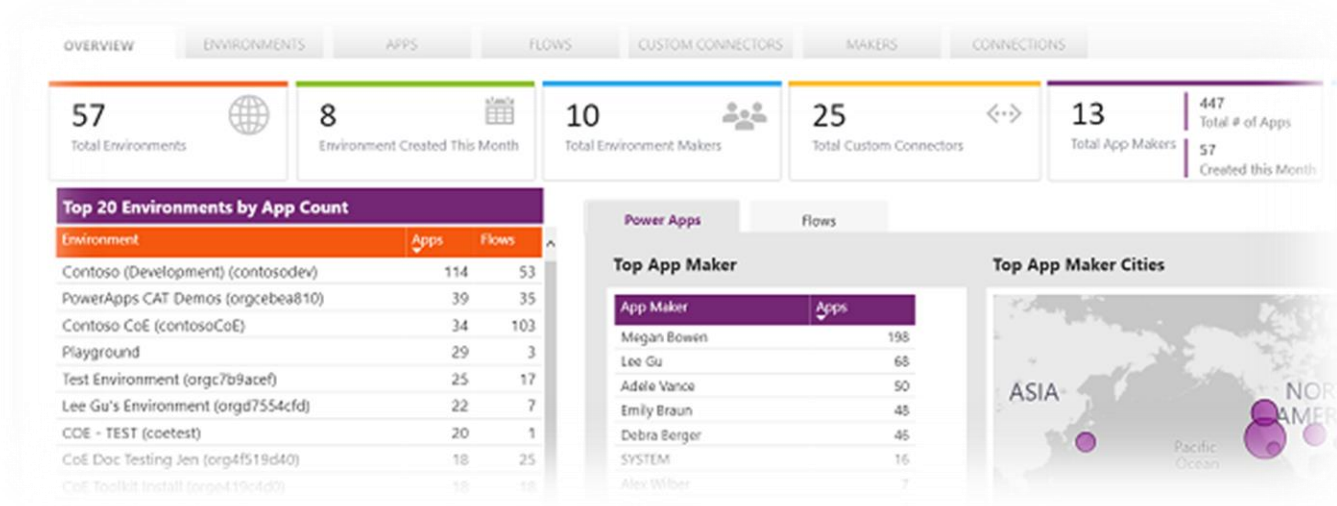

Select a collaboration platform

2

Organize content and access

3

Promote the hub and encourage active participation

Create a centralized collaboration hub for knowledge sharing

Collaboration

Nurture and Adoption

1

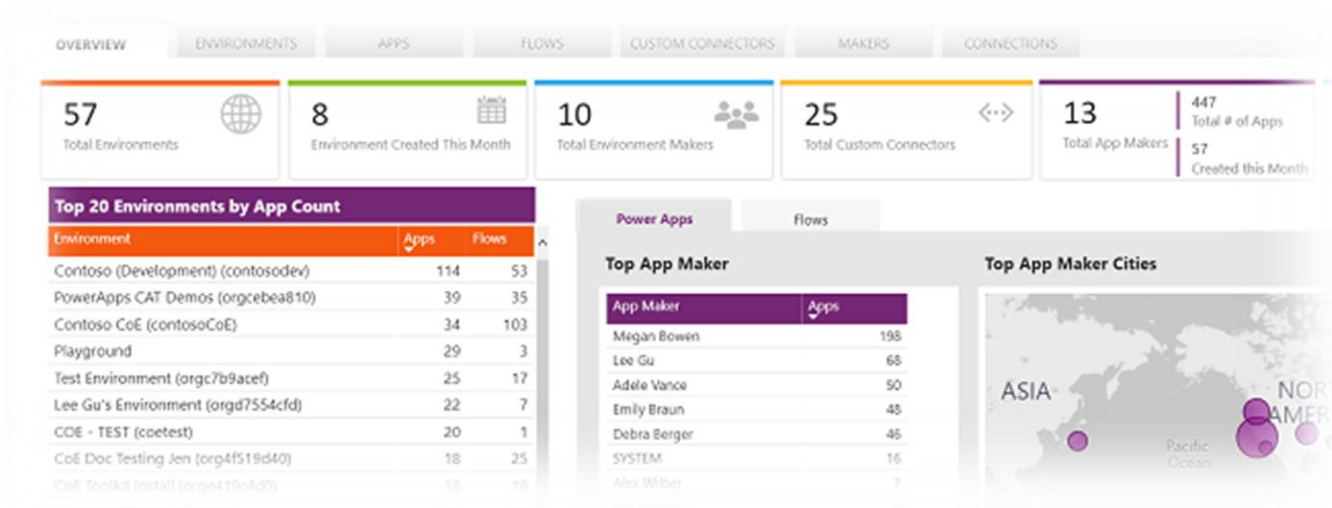

Implement regular learning sessions

2

Encourage sharing of learnings and insights

3

Provide access to learning resources

Focus on developing a continuous learning culture

Continuous Learning

Nurture and Adoption

1

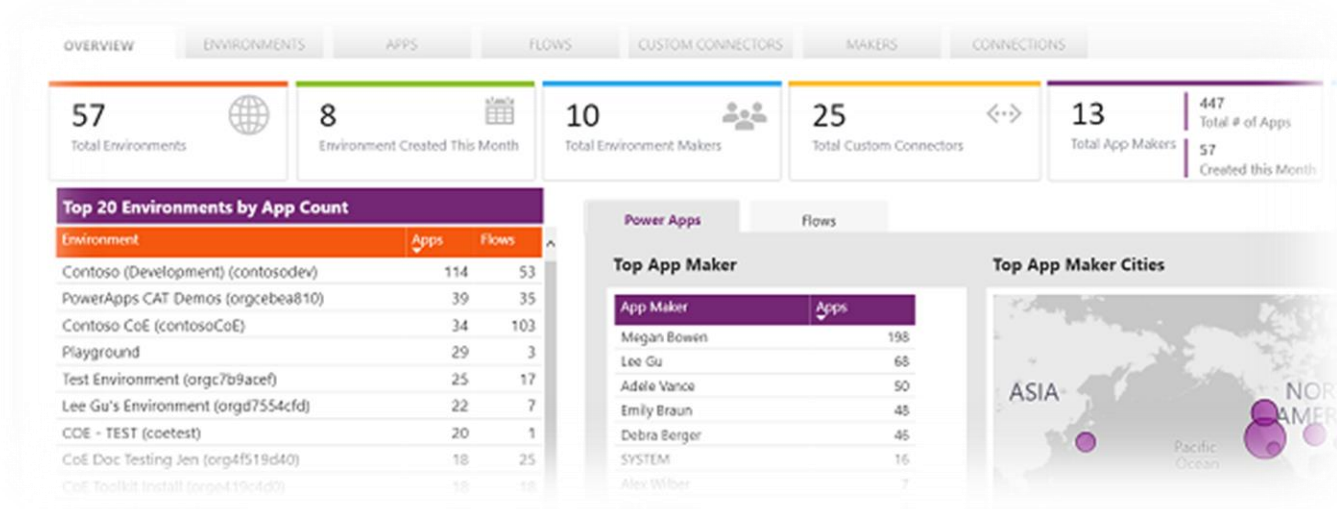

Choose a feedback collection tool

2

Define feedback process and guidelines

3

Review and act on feedback regularly

Implement feedback mechanisms for community engagement

Feedback Mechanism

Nurture and Adoption

1

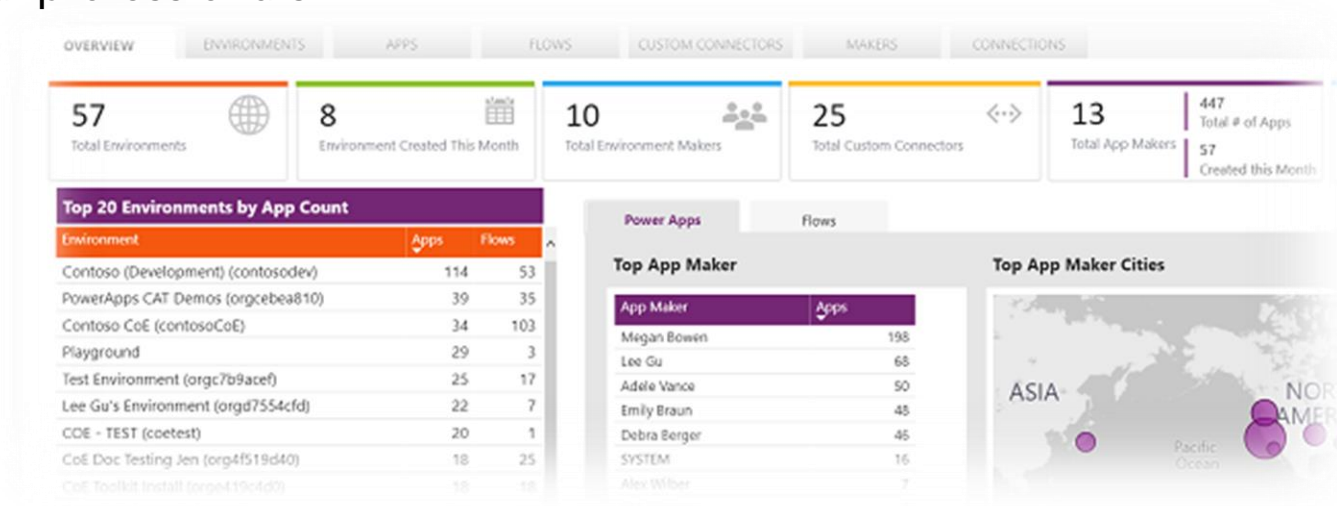

Design a training program for non-technical professionals

2

Provide mentorship and support

3

Create opportunities for practical application

Enable non-technical professionals to transition into low-code development

Career Transition

Nurture and Adoption

1

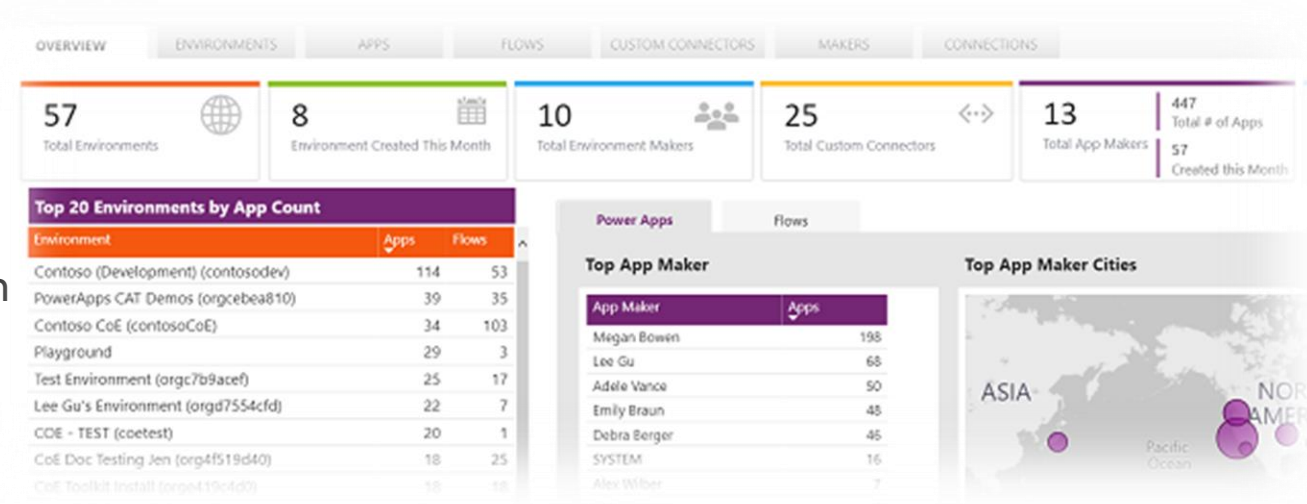

Assess current license usage and needs

2

Develop a cost-effective licensing plan

3

Implement monitoring for compliance and optimization

Formulate a license management strategy for ROI and effective governance

1

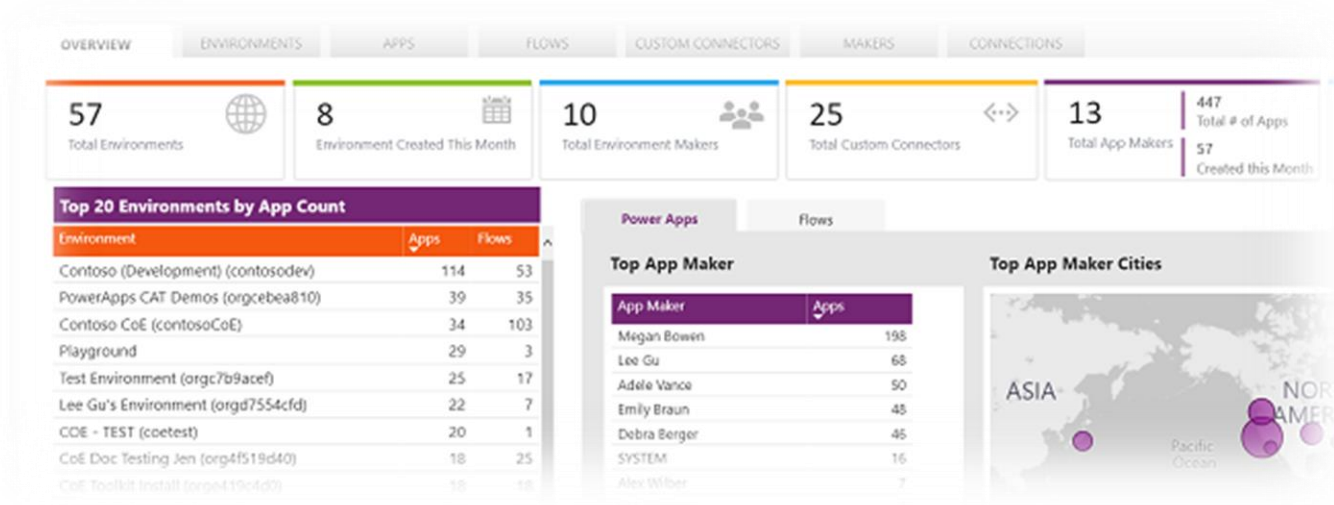

Identify key roles and responsibilities

2

Deploy team management tools

3

Regularly review and adjust team structure

Use planning tools for effective team structure organization

Team Organization

Strategy, Vision, and Business Value

1

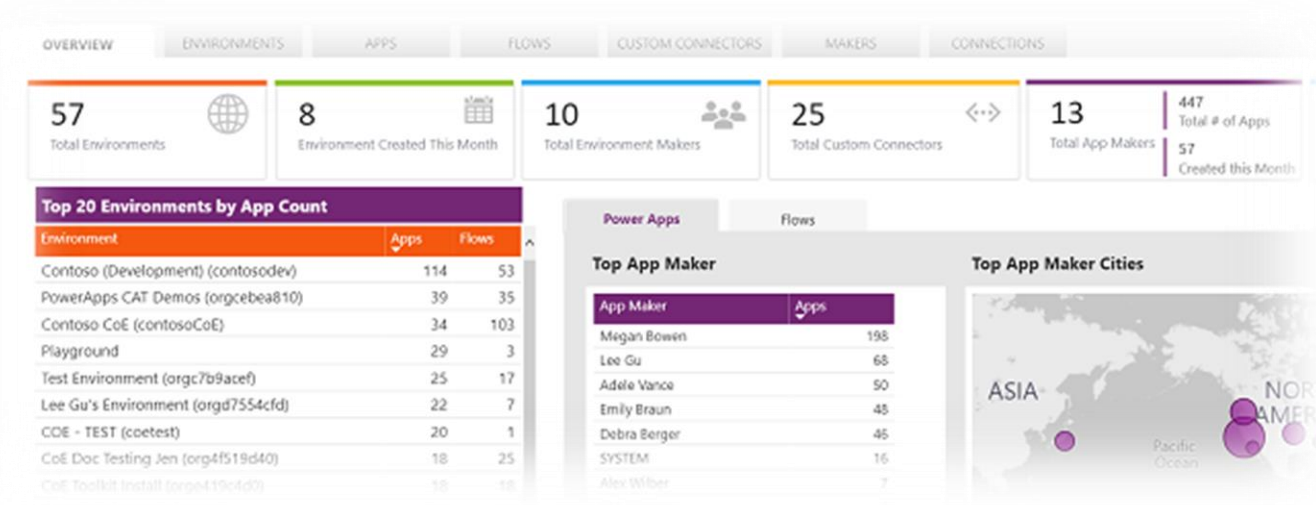

Implement an idea management platform

2

Define criteria for evaluating ideas

3

Establish a process for idea selection and implementation

Introduce an idea submission system for prioritizing development needs

1

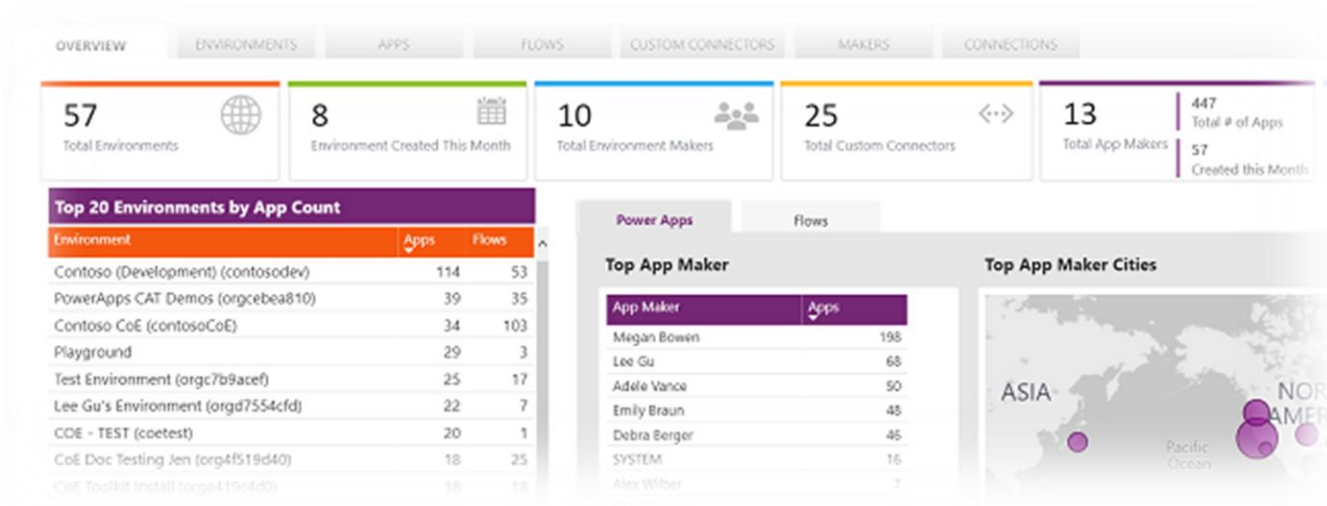

Define the scope of enterprise adoption

2

Identify and assign roles

3

Develop an adoption roadmap with clear milestones

Kickstart enterprise adoption by clarifying roles and responsibilities

Enterprise Adoption

Strategy, Vision, and Business Value

1

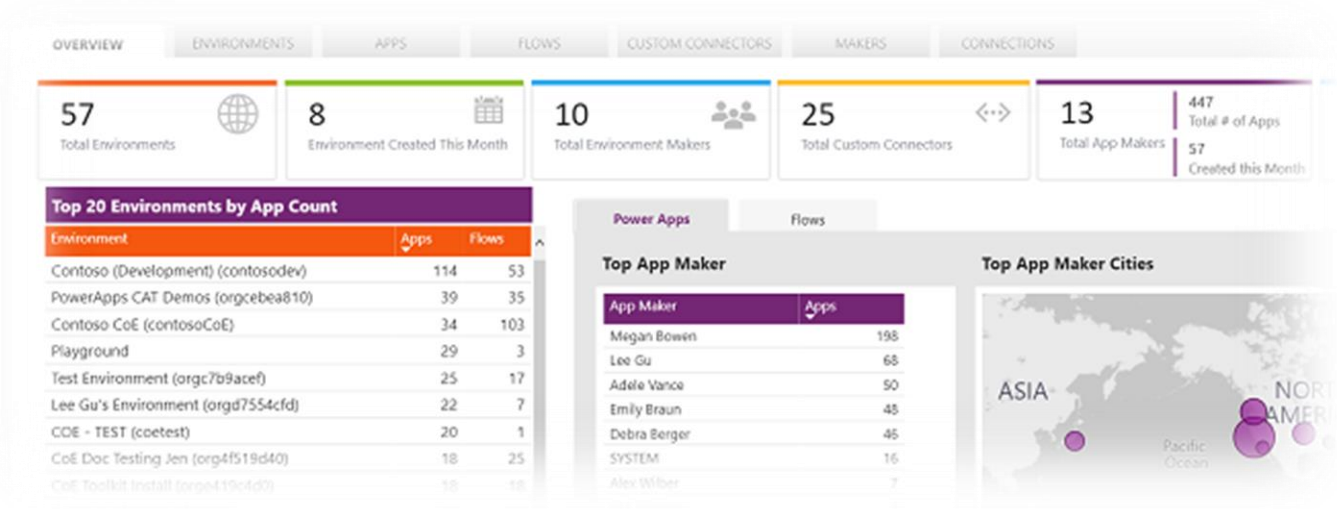

Define metrics for business value

2

Implement tools for tracking these metrics

3

Regularly report on business value to stakeholders

Measure and communicate the business value of low code solutions

1

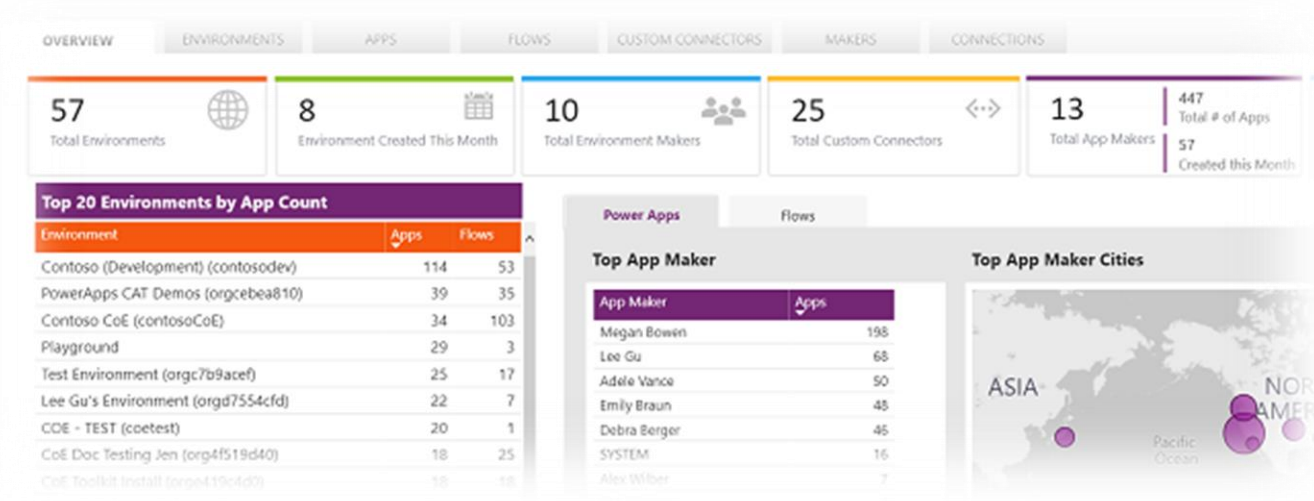

Map out the ecosystem of roles

2

Develop role descriptions and requirements

3

Communicate roles and expectations to the team

Clarify typical roles for adoption and platform success

Role Clarification

Strategy, Vision, and Business Value

1

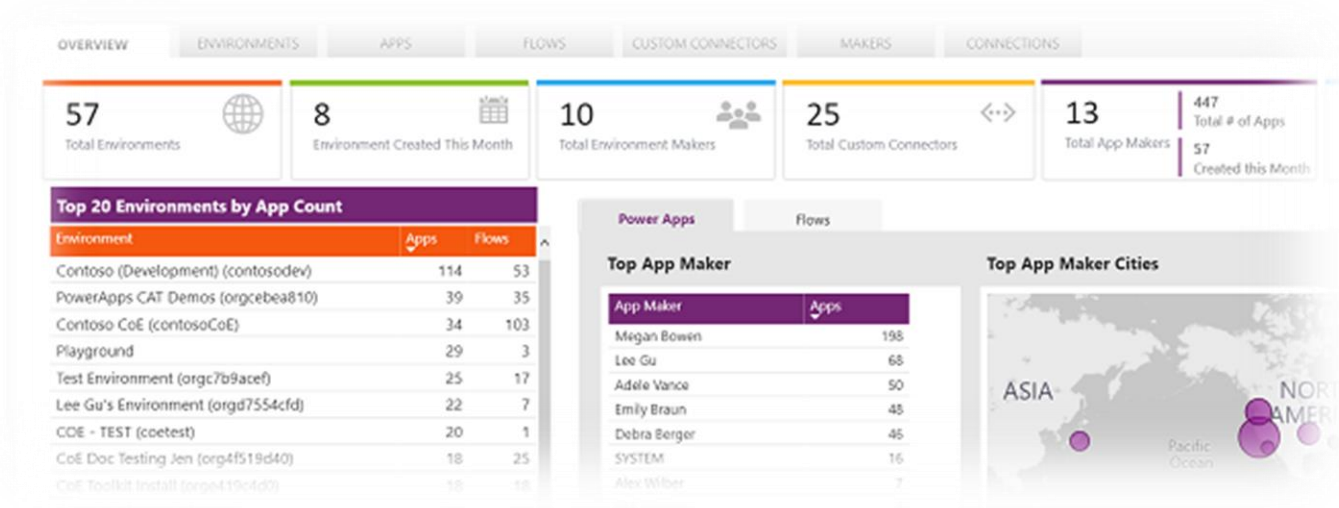

Identify potential sponsors

2

Present the value proposition

3

Formalize the sponsorship and roles

**Secure executive sponsorship
for adoption and success**

Leadership Support

Strategy, Vision, and
Business Value

1

Identify skill gaps and training needs

2

Develop or source training programs

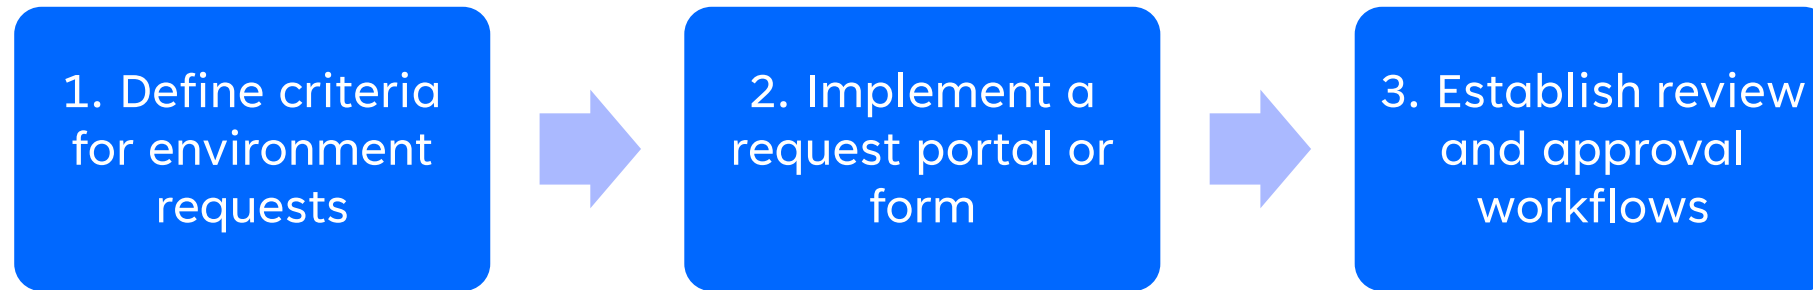

Provide pathways for non-technical professionals in low-code development

Skill Development

Strategy, Vision, and Business Value

Governance and Compliance

GOAL

- Understand how a structured process for requesting new environment instances enhances governance and compliance.
Eg.: Increase compliance rate to 95% / Reduce unauthorized changes by 50%

1. Audit the current state of the default environment

2. Define usage policies

3. Monitor and enforce compliance

Nurture and Adoption

Recognize the importance of managing the default or primary environment for governance and compliance.

Governance and Compliance

1. Audit the current state of the default environment

2. Define usage policies

3. Monitor and enforce compliance

Administration, Governance, and Support

Administration, Governance and Support

Recognize the importance of managing the default or primary environment for governance and compliance.

Governance and Compliance

1. Audit the current state of the default environment

2. Define usage policies

3. Monitor and enforce compliance

Recognize the importance of managing the default or primary environment for governance and compliance.

1

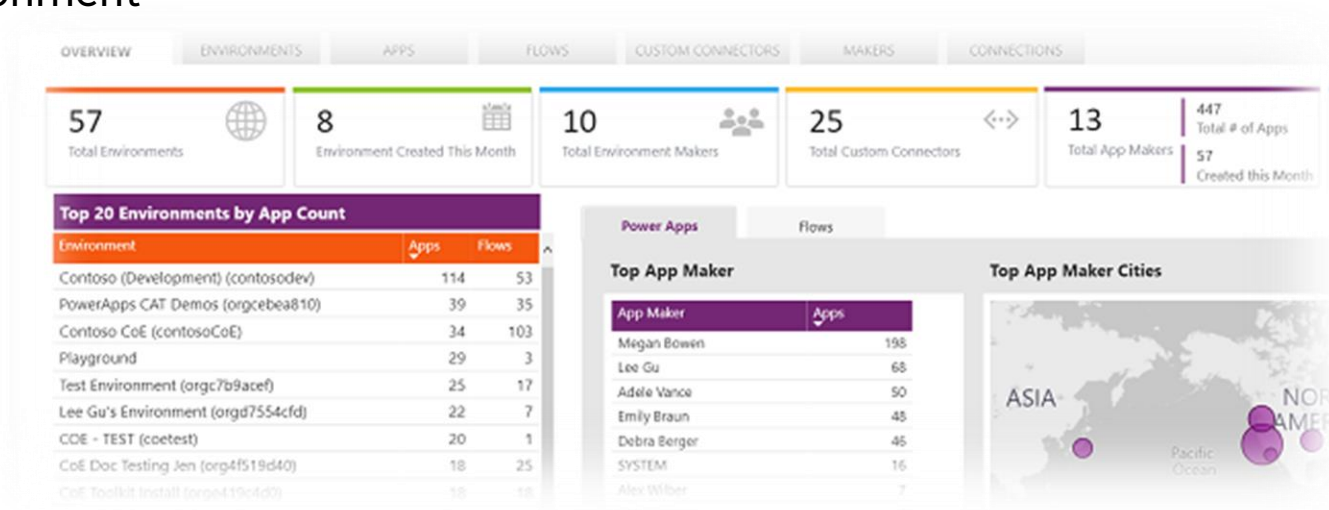

Audit the current state of the default environment

2

Define usage policies

3

Monitor and enforce compliance

Recognize the importance of managing the default or primary environment for governance and compliance.

Governance and Compliance

Administration,
Governance,
and Support

Governance and Compliance

1. Audit the current state of the default environment

2. Define usage policies

3. Monitor and enforce compliance

GOAL

- Recognize the importance of managing the default or primary environment for governance and compliance.

Environment Management

GOAL

- Recognize the importance of managing the default or primary environment for governance and compliance.

Governance and Compliance

Understand how a structured process for requesting new environment instances enhances governance and compliance.

1. Define criteria for environment requests

2. Implement a request portal or form

3. Establish review and approval workflows

Enhancing Governance in Low Code Platform Deployments

Structured process for requesting new environment instances

Improves governance, control, and compliance across low code platform deployments

Ensures alignment with organizational policies

- Serve Customers

ABOUT

We use alliterations to help people remember the personas. We use the about to describe points of interest that make each persona different from the previous one.

GOALS / MOTIVATION

- This is item one
- Here is the second goal
- And a third here

NEEDS

- Here is some more information
- And a bit more here for you to use
- And just one more

PAIN POINTS

- Another point here
- And here

OPPORTUNITIES

- Here are what the user asked for
- Or things we think might be useful
- Or opportunities to add value
- Or even different people who could be included

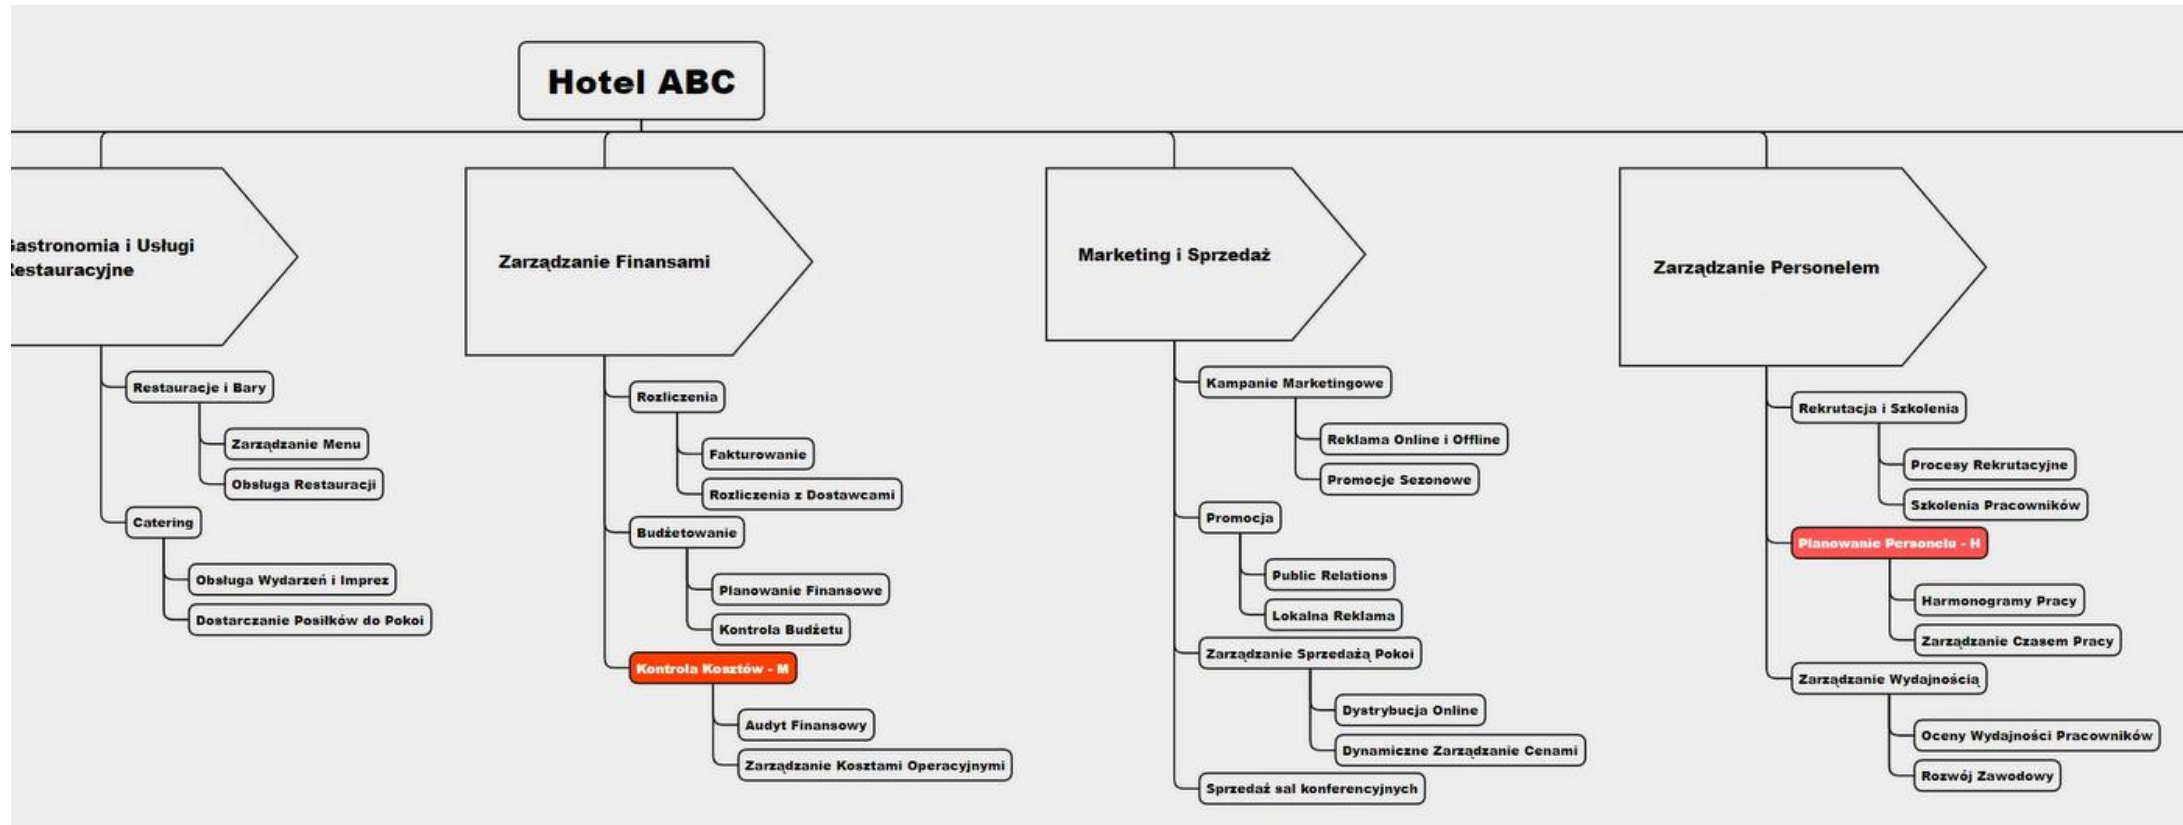

"Insert person quote here"

- Here are the tasks
- Or jobs to be done
- That this person does
- Or some other things that matter to them

- plan rezerwowy
- przeniesienie
- współdzielenie

WHAT IS THE CONCEPT CALLED?		
WHO IS IT FOR?	WHAT PROBLEM DOES IT SOLVE?	WHAT IS THE BIG IDEA?
ILLUSTRATE HOW IT WORKS?		
WHY MIGHT IT FAIL?	WHAT SHOULD WE PROTOTYPE & TEST?	HOW MIGHT WE MEASURE SUCCESS?
HOW WILL WE MAKE THIS HAPPEN?		

WHAT IS THE CONCEPT CALLED?

Customer Personal Shopper

How might reduce wait time of our customers in a store

WHO IS IT FOR?

Customers

Store Associates

WHAT PROBLEM DOES IT SOLVE?

Reduce customers wait time	Reduce lines	Increase total item
Store and drive through over crowded at pick hours	Optimize flow	
	Reduce amount of people in store	

WHAT IS THE BIG IDEA?

Order wherever and whenever they want

Come to the store to pick up

Ready so they can sit and enjoy without waiting

WHY MIGHT IT FAIL?

Discoverability of the App

Data Privacy

Ease of use

Integration with Store Systems

WHAT SHOULD WE PROTOTYPE AND TEST?

Simple App to start with

Simple order online to pick up in store pilot

HOW MIGHT WE MEASURE SUCCESS?

# of orders per day	Revenue Impact	Incremental customer & revenue
Customer satisfaction	Store Experience	Pick up experience
Employee experience	Unexpected benefits	Adoption / reuse

PRESENTATION TITLE

Scaling

Action list

- Engage with IT
- Establish Robust Governance
- Strengthen IT Collaboration
- Replicate Across Business Units

Questions

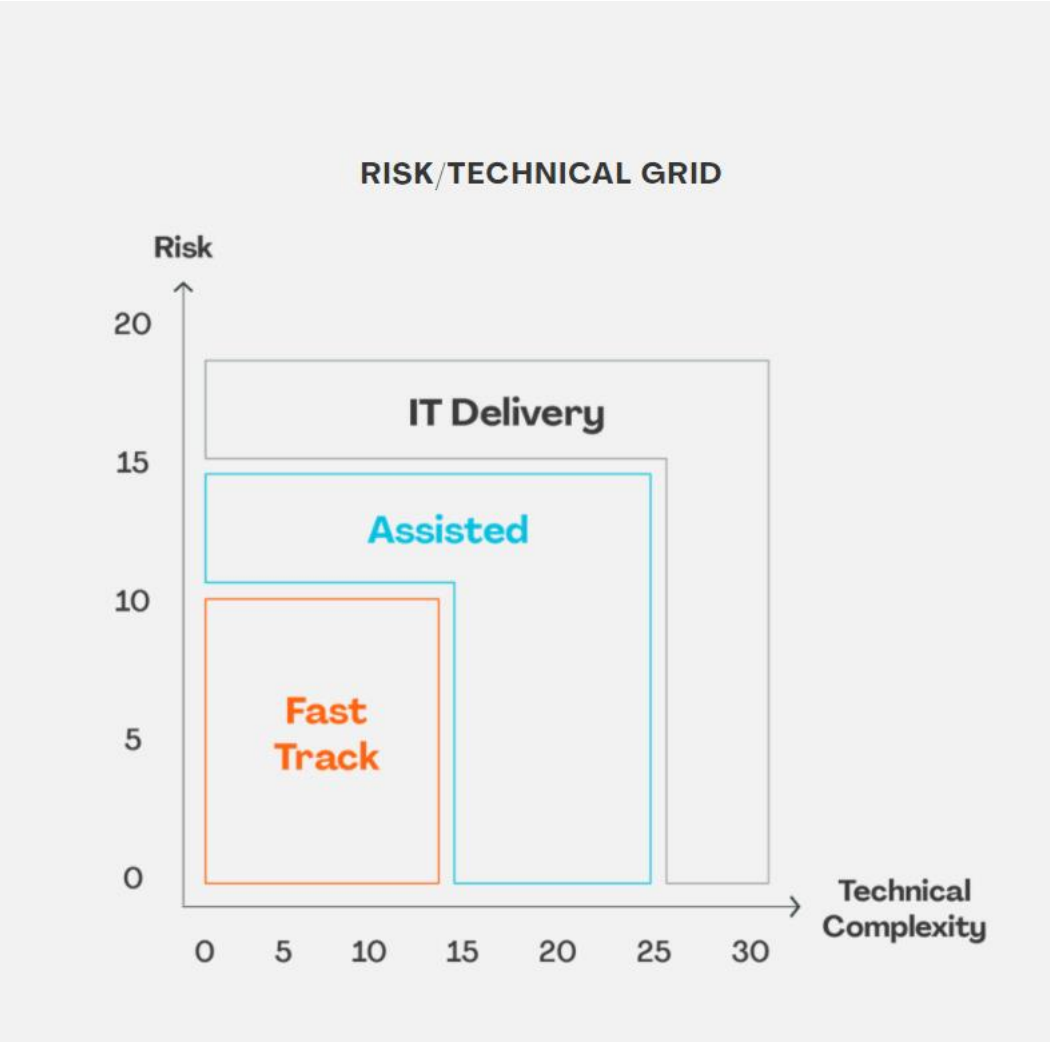

- What mechanisms are in place to measure the success and impact of the CD initiative on a larger scale?
- How do we ensure that the collaboration between IT and Citizen Developers remains effective and efficient in a co-delivery model?
- What are the potential risks of scaling CD, and how are we mitigating them?
- What is the long-term vision for Citizen Development in the organization, and how does the Scaling Phase align with that vision?

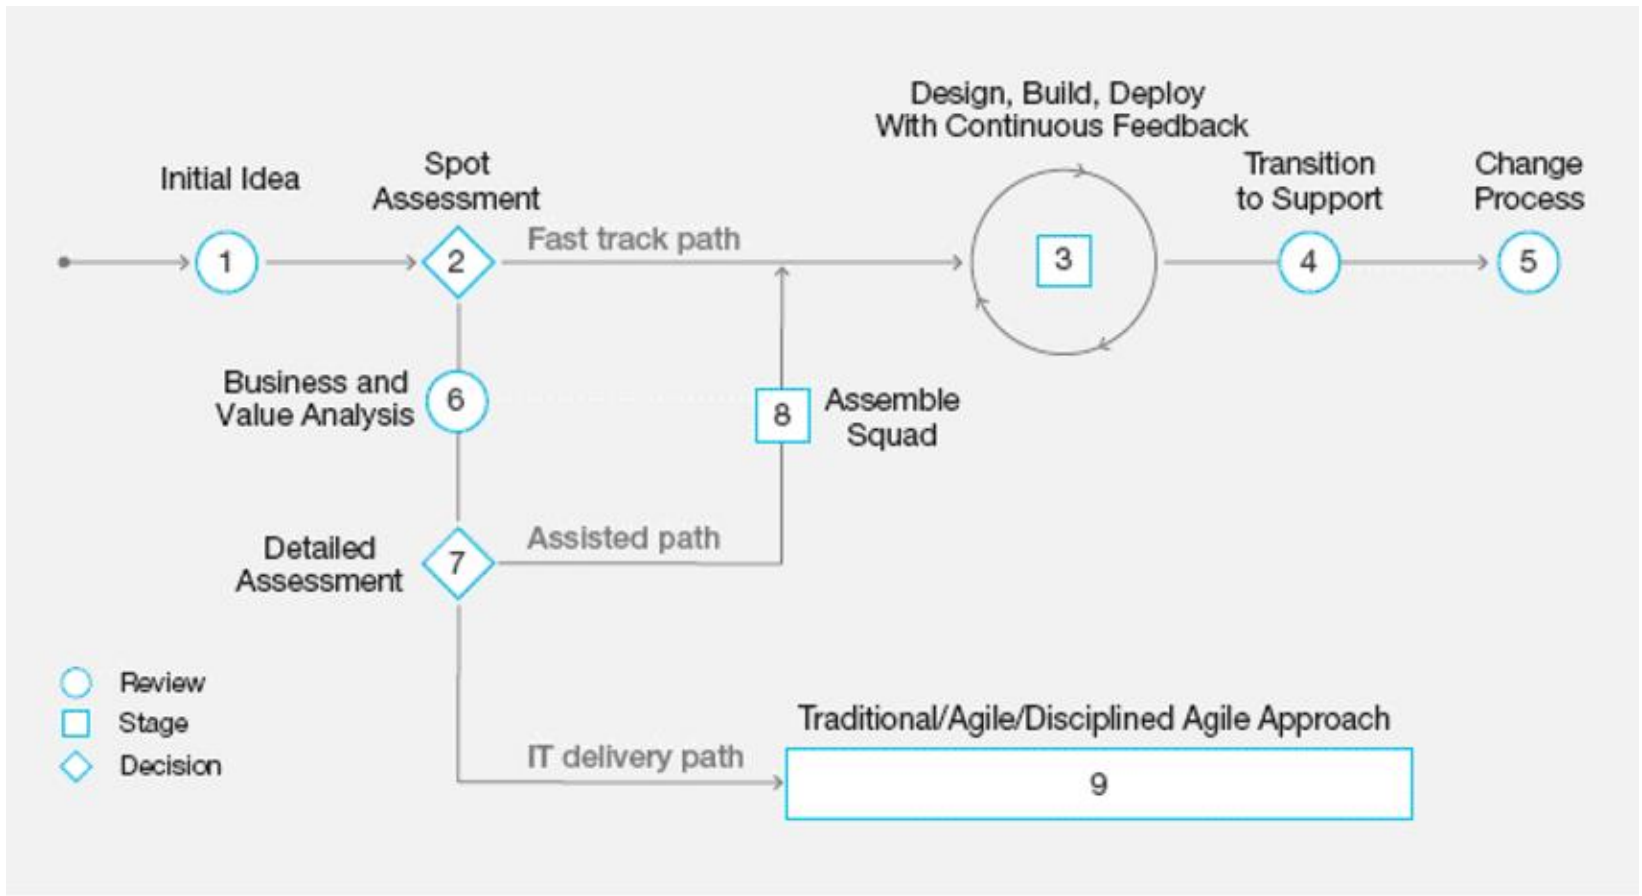

Tools

- Areas recognition
- Teaching skills
- Power Platform CoE equivalent

Risk Category	Description	Mark
Security	<p>Potential breaches of confidentiality, data loss, and uncontrolled user access.</p> <ul style="list-style-type: none"> Low risk: There is low exposure to any of the mentioned items. Medium risk: The potential risks can be mitigated if an expert is brought on board. High risk: Citizen development is not the idea solution given the high-security risks. 	
Operational IT	<p>Acceptable rules to create, manage, maintain, and use IT.</p> <ul style="list-style-type: none"> Low risk: The application can be easily created, managed, maintained, and used according to the organization's IT standards. Medium risk: The application can comply with operational IT requirements if an expert is involved. High risk: Some of the conditions can't be met using citizen development. 	
IT Architecture	<p>Rules to build, modify, and interface IT resources.</p> <ul style="list-style-type: none"> Low risk: The project does not negatively affect other systems or require extensive integration with the wider organization's environment. Medium risk: Some complex integration can be required; therefore, external help is needed. High risk: The project requires extensive integration with other systems or affects the wider organization's environment. 	
Regulatory	<p>External laws, industry standards, or compliance requirements.</p> <ul style="list-style-type: none"> Low risk: There is low exposure to any of the mentioned items. Medium risk: Citizen development can comply with regulatory requirements, but needs the involvement of an expert. High risk: Citizen development is not the idea solution given the high level of regulatory risk. 	
Reputational	<p>Potential loss of brand perception, social capital, or market share.</p> <ul style="list-style-type: none"> Low risk: There is a low risk to the organization's reputation as the app doesn't use sensitive data or negatively affect third parties, following accepted social guidelines. Medium risk: There is some reputational risk associated with the app so an expert must be brought in to ensure the risk is mitigated. High risk: There is high reputational risk due to highly sensitive data being processed and/or the app being a <u>key-way</u> in which an organization interacts with their customer. 	
Financial	<p>Potential impact on revenue.</p> <ul style="list-style-type: none"> Low risk: The app has little to no impact on the business processes that 	

Strategy

Action list

- C-level Engagement and Alignment
- Train and Mentor
- Expand Training Programs
- Community Building
- Stay Updated with Technological Advances

Questions

- How will the organization maintain the agility of CD while upholding the rigor of governance and auditing mechanisms?
- How will the organization manage IT & CD knowledge stay up to date?
- Are there plans to externally showcase the success of the CD initiative, potentially as a thought leader in the space?
- How will the organization ensure that the CD initiative remains aligned with changing business goals and market dynamics?

Tools

- Business Assessment

ORGANIZACJA

- Jakie są kluczowe (i odważne) cele organizacji? Jaki jest ich obecny stan realizacji i jakie konkretne mierniki określają stopień ich realizacji? Jaki jest **oczekiwany czas realizacji** danych celów?
- Jakie są kluczowe wartości firmy?
- Jak firma realizuje Cele Zrównoważonego Rozwoju (ESG)?
- Jakie są główne obszary operacyjne biznesu? Które z nich będą podlegać usprawnieniom, modyfikacjom? (np; Obsługa Klienta, Zakupy, Sprzedaż, Marketing, Księgowość itd.)
- Które obszary biznesu są najbardziej czasochłonne pod kątem pracy, generują najwięcej błędów operacyjnych, jest w nich największy potencjał na zautomatyzowanie powtarzalnych procesów? Które mają priorytet z perspektywy celów strategicznych? (np; Obsługa Klienta: Duża ilość czasu na rozwiązywanie problemów, Finanse: Czasochłonność generowania raportów, długie procesowanie obiegu faktur i procesu ich akceptacji, ograniczona możliwość generowania analiz strategicznych wykorzystując dane z różnych systemów; Zakupy: utrudniona porównywalność realizowanych zakupów w poszczególnych jednostkach)

DOJRZAŁOŚĆ IT I LOW-CODE

- Kto ma w kompetencjach zarządzanie wsparciem rozwoju biznesu za pomocą rozwiązań IT?
- Czy prace rozwojowe są realizowane na bieżąco czy reaktywnie?
- Czy prace są realizowane wewnętrznie czy zewnętrznie?
- Ile łącznie MD prac rozwojowych jest prowadzonych w skali roku?
- Jak wygląda proces wytwórczy? Czy jest stosowane podejście Agile?
- Czy jest powołany zespół Center of Excellence w obszarze **Low-Code**?
- Jakie są główne przyczyny zainteresowania podejściem **Low-Code**? (np.: Niedobór programistów, Przetarzałe systemy, Niezgodność z potrzebami biznesowymi, Brak funduszy na niekrytyczne aplikacje biznesowe, Brak interfejsów API i usług, Brak aplikacji biznesowych dla użytkowników biznesowych)

Analysis workshops questions

1. Current state/situation

Let's talk about your current state. What does your world look like today and what's not optimal that you want addressed?

2. Future state

What does we want our world to look like tomorrow? What are some of your top objectives and critical business outcomes that you want to see realized?

3. Bridge

What steps are you currently taking or planning on taking to get to that future state?

4. Why now?

What is at stake or the condition that requires action now? Is there any urgent or important events or dates we need to be aware of or consider as we move forward?

Analysis workshops questions

5. Define success

What is the expected outcome to achieve this vision? What does success look like when this is in place? By when do you want this outcome to occur?

6. Declare challenges

What challenges currently stand in the way? What has or will hold us back from being successful in achieving those goals?

7. Stakeholder groups

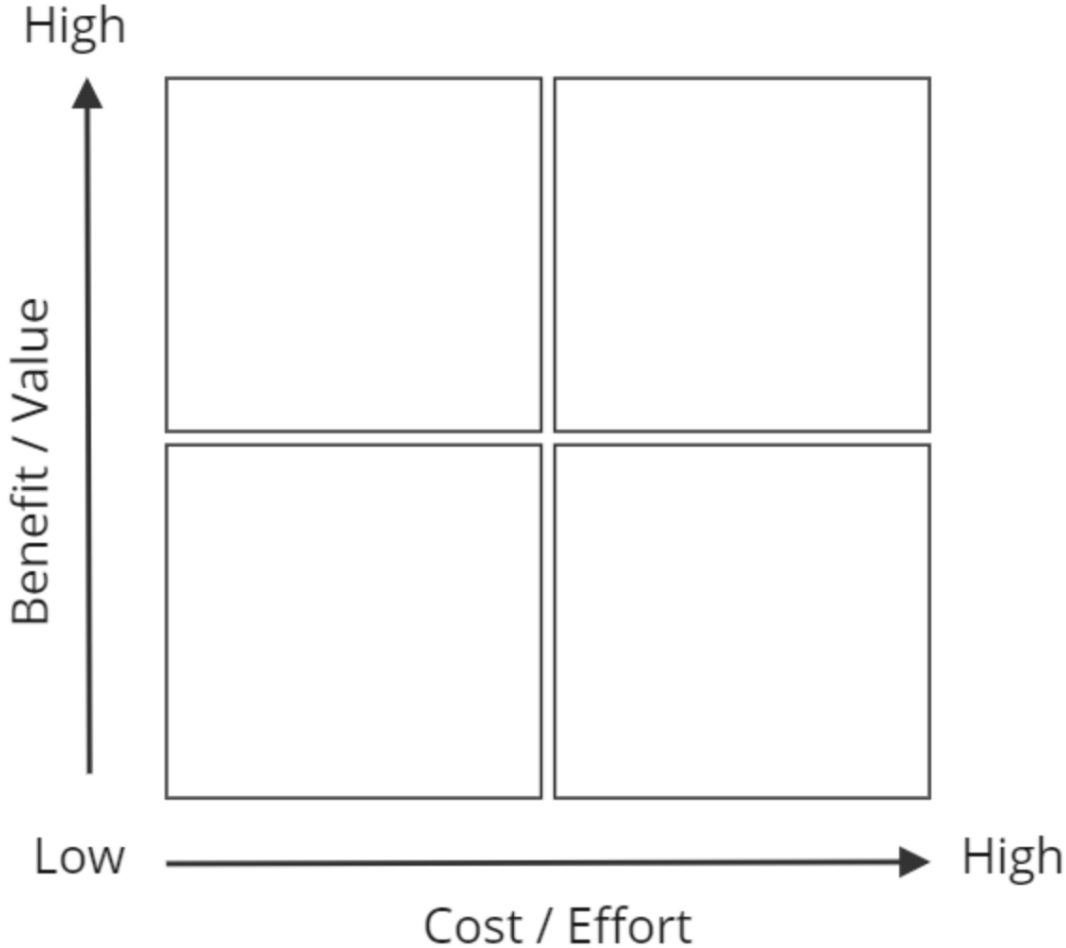

Who are the groups of people that should be included in working on a solution around this? Or who needs to be informed or updated about this if we do something?

8. Concerns/Questions

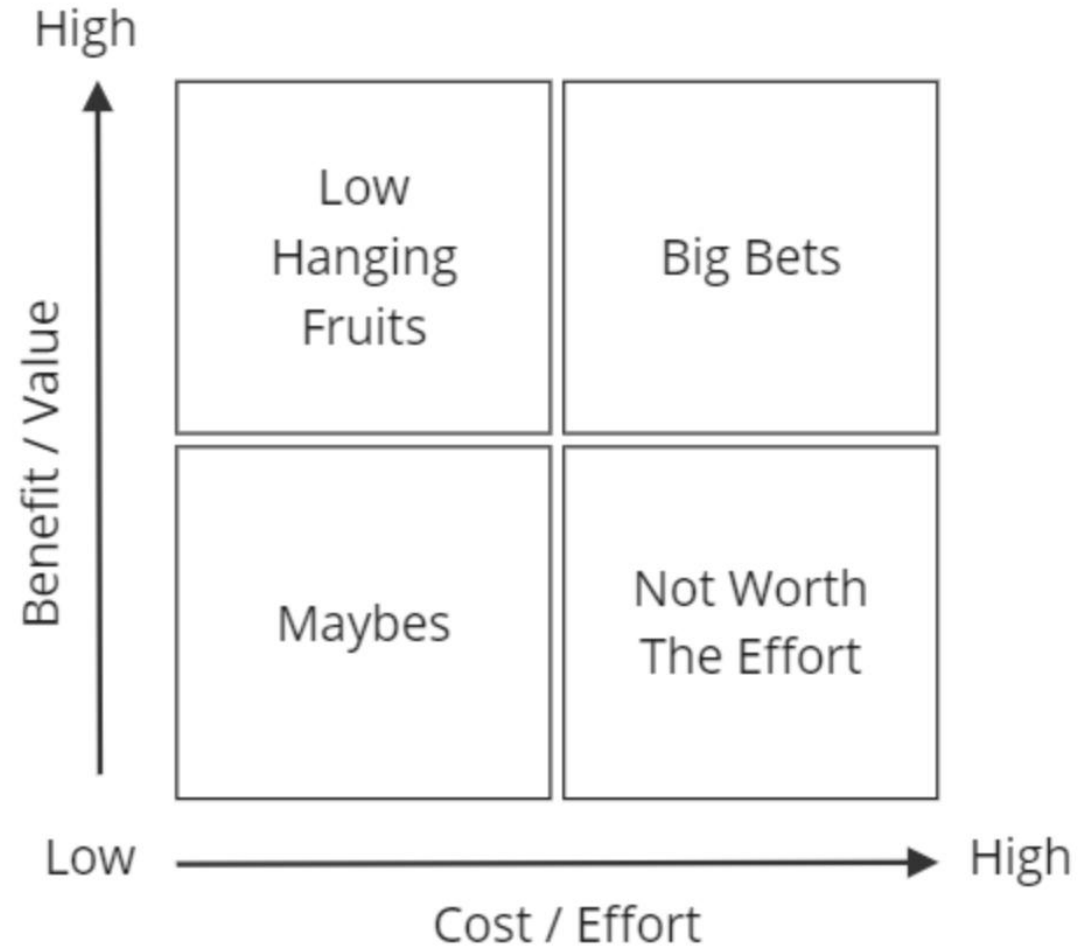

If we do this workshop, do you have any concerns or questions that we should be aware of?

Prioritization Matrix

Prioritization Matrix

RACI MATRIX

R -Responsible

- **Responsible** means they are responsible for actually doing the task.

A -Accountable

- **Accountable** means they will be held accountable if the task is not complete on time or is delayed.

C - Consulted

- **Consulted** means the person will need to be consulted before the task is completed.

I - Informed

- **Informed** they need to be let know of the task and its status.

KPI

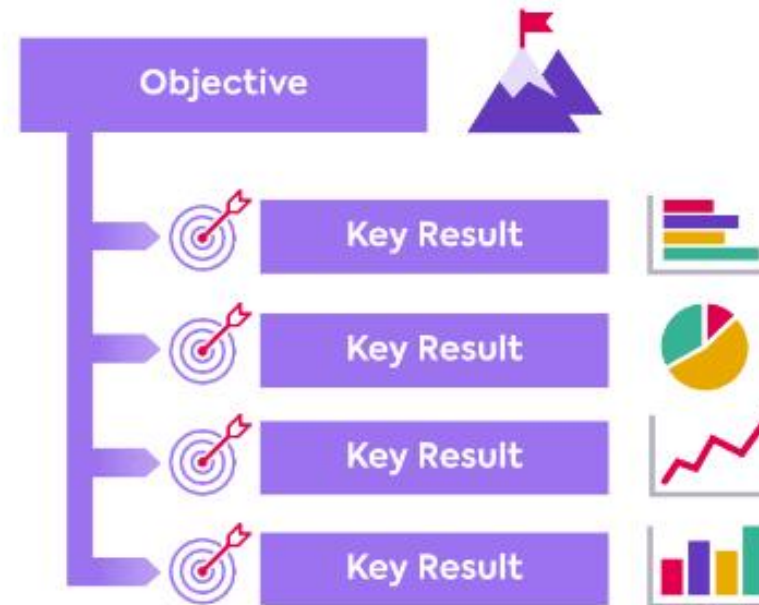

KPI

A single data point to track and monitor performance of a particular area

OKR

A framework to drive strategic objectives

SMART

Optimization of Price Change Acceptance Process Time and Stakeholder Engagement through Automation

Specific

- Implement an automated workflow for the price change acceptance process to streamline stakeholder involvement and reduce the time required to finalize price changes.

Measurable

- Decrease the average time taken to complete the price change acceptance process by 50%, while ensuring that all necessary stakeholders are engaged in each instance.

Achievable

- With the current manual process benchmarked, introducing automated workflows and alerts is a realistic objective that can be met with our existing technology stack and process change management practices.

Relevant

- Accelerating the price change acceptance process is crucial for responding to market fluctuations swiftly, maintaining pricing competitiveness, and reducing time-to-market for new pricing strategies. This KPI is pertinent to our goals of agility and efficiency.

Time-bound

- Accomplish the targeted reduction in the process time within 6 months after the automation system goes live, with interim progress evaluations on a monthly basis.

MVP

Minimal

The most rudimentary,
bare-bones foundation of
the solution possible

Viable

Sufficient enough for
early adopters

Product

Something tangible
customers can touch
and feel

MVP

THE FORRESTER WAVE™

Low-Code Development Platforms For AD&D Professionals

Q1 2019

Governance and monitoring

POWER PLATFORM ADMIN CENTER

- Establish tenant and environment level DLP Policies
- Manage permissions and access
- Enable approval proces for new solutions

MICROSOFT PURVIEW

- Report on resource usage
- Monitor data usage, integrations and user access
- Set up sharing alerts and mitigations

CENTER OF EXCELLENCE KIT

- sync all your low code resources into tables and build admin apps on top of that to help you get more visibility of the apps, flows, and makers in your environment
- Adds approval proces which gathers additional information about your apps from your makers, or audit specific connectors or app usage.
- Contains nurturing components with best practices and templates for existing and new makers

Power Platform Admin Center

Environments	View, create, and manage your environments. Select an environment to see details and manage its setting
Analytics	Get a detailed view of key metrics for Microsoft Power Platform apps
Billing	View a summary of environments in your tenant requiring licensing attention and license consumption for your environments
Data	View and manage various policies for your tenant and environments. Especially: Data policy, Tenant isolation policy, Customer Lockbox policy, Enterprise policies, Billing policies
Data integration	Point-to-point integration service used to integrate data into Dataverse. It also supports integrating data into finance and operations apps and Dynamics 365 Sales.
Help + support	Get a list of self-help solutions or create a support ticket for technical support Note: Although, you administer Power BI using the Power BI admin portal, you request support for Power BI through Help + support in the Power Platform admin center.
Resources	View and manage resources in your tenant and environments
Settings	Manage settings for all environments in your tenant
Policies	Manage your cloud and data gateway connections

Microsoft Purview +

Microsoft Purview +

- Audit
- Communication Compliance
- Compliance Manager
- Data Lifecycle Management
- eDiscovery

Microsoft Purview Logs +

Over 30+ log activities types, among others:

- Created app
- Edited app
- Deleted app
- Launched app
- Published app
- Marked app as Featured
- Edited app permission
- Restored app version
- Patched app
- Deleted app version
- Consented to app's APIS
- Admin modified app owner
- Admin set bypass consent state
- Imported new canvas app

Microsoft Purview Logs +

Cloud flows

- Created flow
- Edited flow
- Deleted flow
- Edited flow permissions
- Deleted flow permissions
- Started a Flow paid trial
- Renewed a Flow paid trial

Hosted RPA flows

- Created hosted machine group
- Created hosted machine
- Deleted hosted machine

Microsoft Purview Logs +

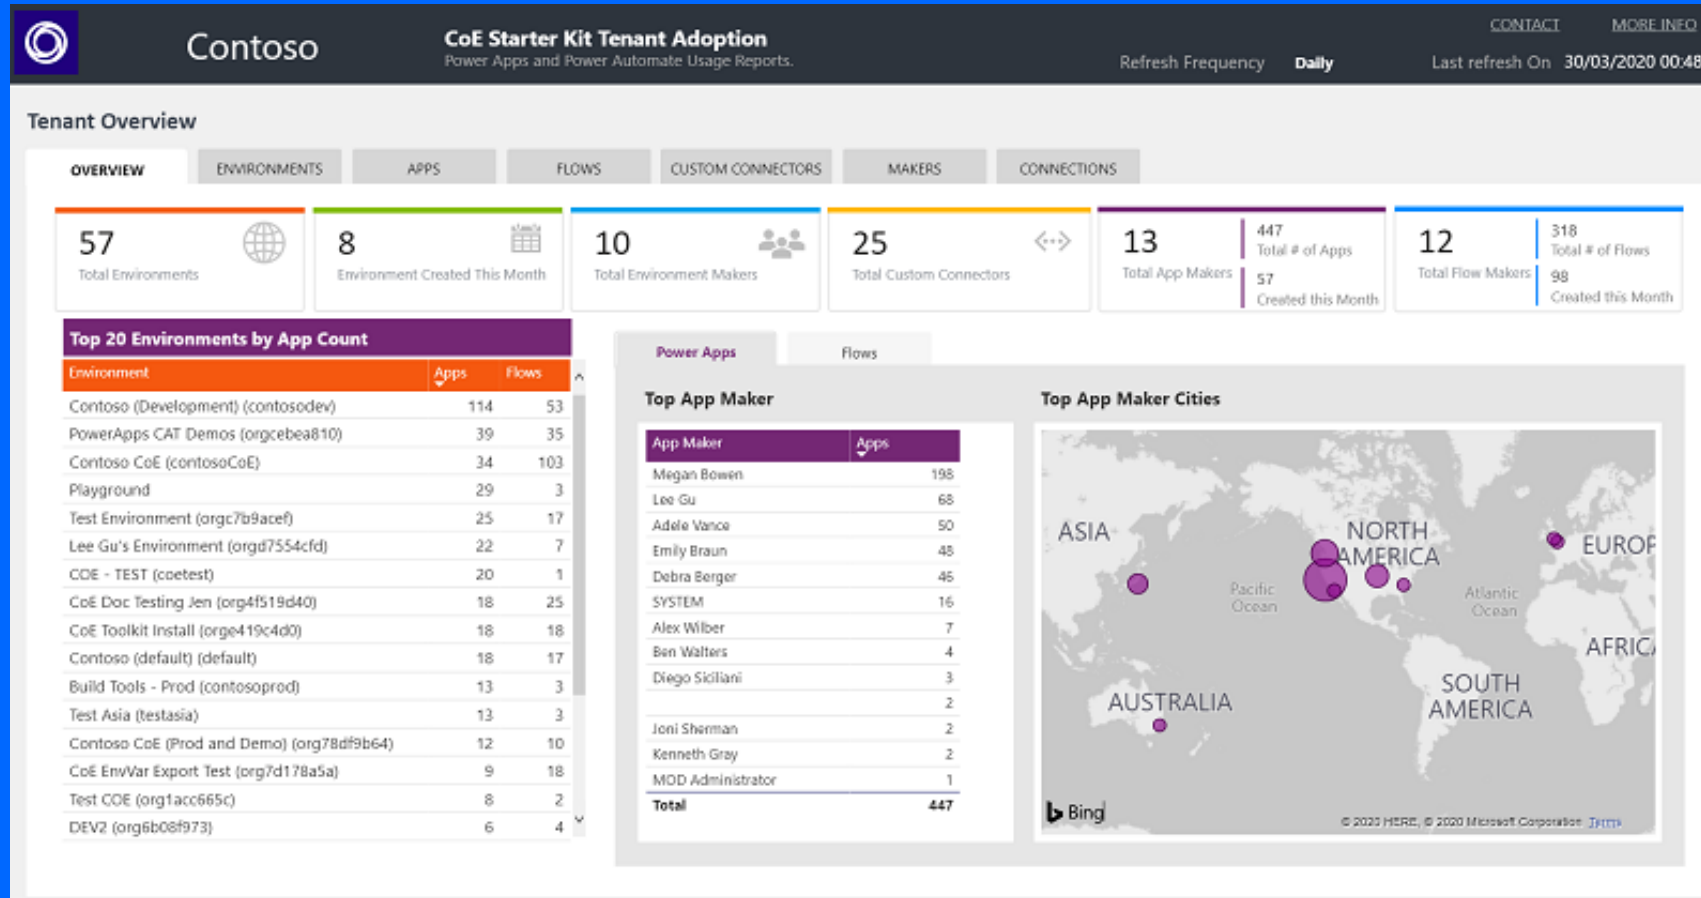

Over 150+ log activities types, among others:

- Viewed Power BI dashboard
- Created Power BI dashboard
- Edited Power BI dashboard
- Shared Power BI dashboard
- Printed Power BI dashboard
- Viewed Power BI tile
- Exported Power BI tile data
- Downloaded Power BI report
- Viewed Power BI metadata
- Retrieved Power BI group members
- Created Power BI app
- Added data source to Power BI gateway
- Shared Power BI report

Center of Excellence Kit

Center of Excellence Kit

The screenshot displays the Power Platform Admin Center interface for a PowerApps app named 'Northwind Orders (Canvas) - Begin Part 1'. The app is in the approval process, with a red box highlighting the 'Validate Maker Business Requirements (14 D)' step. A modal dialog is open over this step, showing the following details:

- Check if Maker Provided Business Requirements: No
- Confirm Business Impact: ---
- Next Stage >

The main interface shows the app's general details, including:

- App Environment: PowerApps
- App Type: Canvas
- App Shared Users: 0
- App Shared Groups: 0
- App Modified On: 3/30/2020 3:42 PM
- App Created On: 3/30/2020 3:42 PM
- App Published: 3/30/2020 3:42 PM

The 'APP SHARED WITH (LIST)' section shows the following user:

Power Platform User	Type (Power Platform User)	Group Size (Power Platfor...)	Role Name (friendly)
Lee Gu	User	1	Owner

The 'APP SHARED WITH' section includes a bar chart showing the distribution of roles:

Role Name (friendly)	Count
Owner	1

Center of Excellence Kit

The screenshot displays the 'Contoso video hub' interface. On the left, there is a navigation sidebar with 'Start', 'Find', and 'Playlists' options. The main content area features a horizontal filter bar with tabs for 'All', 'Power Apps', 'Power Automate', 'Power Virtual Agents', 'Power BI', 'Dataverse', 'AI Builder', and 'Custom Connectors'. Below the filters, there are four video thumbnails. The first video is titled 'Coca-Cola Bottling Company United streamlines order management with RPA in Power Automate', created on 22/03/2022, with 3 views and 5 likes. The second video is 'North Star Architecture for Power Platform – Power CAT Live', created on 24/03/2022, with 3 views and 1 like. The third video is 'Free Templates For Power Platform Adoption - Power CAT Live', created on 24/03/2022, with 5 views and 0 likes. The fourth video is 'Use the JavaScript Client API for Model Driven Apps with Jens Schröder - Power CAT Live', created on 24/03/2022, with 24 views and 4 likes. On the right side, there is a 'Featured contributor' section for 'Lee Gu', a Director at Overland Park. Below this, there is a section for 'Contributor profile information' showing 'Level - Intermediate' and 'Open to help - Yes'. At the bottom right, there is a button labeled '12 number of videos' with a right-pointing arrow.
